CO-CREATING VALUE WITH THE SMART TRANSPORT HUB

DEEP DOMAIN AND OPERATIONAL KNOWLEDGE	
CERTIS	**SMRT**
• Over 60 years' experience in successfully driving operational efficiencies and realising business critical outcomes for clients. • Delivers Security+, a unique service offering that integrates and orchestrates multi-service operations to ensure seamless round-the-clock management of both critical and non-core services.	• In-depth experience of multi-model public transport spanning 33 years. • Operates a transport network that has spurred Singapore's growth while connecting communities and transforming the way people live, work and play.

Through the synergistic partnership of Certis and SMRT, we have co-innovated the Smart Transport Hub. Capable of transforming traditional transportation frameworks into intelligent, proactive networks, the Hub secures the long-term viability of your transport system while supporting effective project development and asset management.

DRIVEN BY SECURITY+

The Smart Transport Hub harnesses the might of Security+. Designed and developed by Certis, this unique service offering integrates and orchestrates multi-service digital operations through cutting-edge technologies. Covering a comprehensive suite of services that extend well beyond security, Security+ offers advanced security, guest services and integrated facilities management to power the Smart Transport Hub and deliver greater efficiency, productivity and customer experience throughout your transport network.

ADVANCED SECURITY **GUEST SERVICES** **INTEGRATED FACILITIES MANAGEMENT**

GAIN THE POWER OF A SMART TRANSPORT SYSTEM

TRANSPORT 4.0
• Simplified, quick to deploy secured hybrid cloud solution.
• Driven by Ops-Tech and deep knowledge of transport domain operations.

APPLIED INTELLIGENCE
• Leverages Certis' Operational-Design First approach.
• Harnesses artificial intelligence, data and autonomous systems to achieve synergy across multiple operations and processes at scale.

ECOSYSTEM OF CO-INNOVATIONS
• Brings together the transport industry, supporting operations and research institutions.
• Delivers digital advancements and co-evolution of value.

Sustainable, scalable and commercially viable, the Smart Transport Hub is an intelligent modular transportation engine designed to reduce stress on existing traditional transport networks by harnessing technology and artificial intelligence to deliver developmental capabilities.

Powered by deep domain knowledge, operational know-how and state-of-the-art technology, this holistic framework successfully reduces gridlock, increases operational efficiencies and enhances commuter experience.

KEY BENEFITS

Holistic, non-intrusive security that leverages an integrated security approach

Streamlined operations orchestration

Hassle-free journey and improved commuter experience

IoT-enabled multi-sensory network with pervasive intelligence
