

Songlines Control is an AI governance and cost intelligence platform purpose-built for Australian government agencies and regulated enterprises. It provides a unified control plane for every AI workload running across your organisation — whether on Azure OpenAI, Anthropic, AWS Bedrock, Google Vertex, or local sovereign models.

Why Songlines Control?

As AI adoption accelerates, organisations face a growing set of operational risks: runaway token costs, shadow AI usage, policy violations, and the inability to demonstrate compliance to auditors. Songlines Control solves all of these in a single platform, deployed in minutes via the Azure Marketplace.

AI Cost Intelligence. Track spend, token consumption, and cost-per-workflow in real time. Set budget alerts, forecast monthly burn, and identify which teams or models are driving costs — before the invoice arrives.

Policy & Compliance Enforcement. Define routing rules and content policies that automatically enforce your organisation's AI usage standards. Every request is logged with a full audit trail suitable for IRAP, ISO 27001, and SOC 2 reviews.

Model Routing & Optimisation. Intelligently route AI requests to the most cost-effective or policy-compliant model for each task. Reduce spend by up to 40% without changing a line of application code.

Observability & Tracing. Full request-level telemetry with latency percentiles, error rates, and per-model performance breakdowns. Identify bottlenecks and regressions before they impact end users.

Sovereign AI Support. Purpose-built for Australian government with support for sovereign model deployments, IRAP documentation generation, and data residency controls.

Multi-Tenant & Role-Based Access. Manage multiple teams or business units from a single control plane with per-organisation isolation, role-based access control, and separate billing.

Deployment

Songlines Control is a fully managed SaaS product. After purchasing through the Azure Marketplace, you will be redirected to the Songlines onboarding flow where you can connect your first AI provider in under five minutes using our SDK or direct API integration. No infrastructure to manage, no agents to deploy.

Pricing

Songlines Control is available in three plans — Control, Gateway, and Platform — billed monthly or annually. All plans include a 14-day free trial. Volume discounts are available for government procurement frameworks (GITC, DSPF, IRAP).

Support

Enterprise and government customers receive dedicated customer success management, SLA-backed support, and access to the Songlines compliance documentation library. Contact sales@cetusai.com.au for procurement and onboarding assistance.
