

Managed Microsoft Defender

CGI

Reduce your attack surface and eliminate persistent threats

CGI is recognized as a Leader in the IDC MarketScape Canadian Security Services 2022 Vendor Assessment. “CGI maintains one of the biggest security teams in Canada, and one out of CGI’s nine SOCs (security operations center) worldwide is in Canada,” writes Yogesh Shivhare, research manager at IDC Canada. “The company leverages its national and global security capabilities to offer a one-stop shop for end-to-end solutions to support customers’ ecosystems across the value chain. CGI can bring together multidisciplinary teams to deliver complex digital transformation projects for clients with integrated security.”

Backed by over 25 years of quality services delivery, CGI helps companies in the government, healthcare, manufacturing, telecommunications, transportation, financial, utilities, and retail sectors transform their IT operations to the Azure Cloud.

Migrating IT functions to Azure makes sense for different reasons. Among other advantages, Azure brings powerful capabilities to the table, including a comprehensive range of powerful Azure-native security tools, such as Defender, to establish a trusted environment with balanced and managed security services for your critical assets. At CGI, we can help you ensure that you have implemented those tools correctly and have the capacity to maximize their value and protect your business.

Managed Microsoft Defender Security Services

The modern way of working requires a distributed hybrid infrastructure. This comes with additional security challenges of an expanded attack surface. The Microsoft 365 Defender products is a cloud native XDR solution that enhances detection, prevention, investigation and response to cross-domain attacks.

CGI's security consultants will assess your environment setup and implement Microsoft 365 Defender security products. Configuring Microsoft 365 Defender products will reduce your attack surface and eliminate persistent threats. Microsoft 365 Defender will integrate threat detection data and prevent cross-domain attacks.

Our security operations center (SOC) will provide 24/7/365 monitoring and investigation of incidents and alerts in Microsoft 365 Defender.

CGI's managed security services will integrate the Microsoft 365 Defender products in your environment across: identities, endpoints, email and documents, SaaS apps, as well as protecting your infrastructure with Microsoft Defender for Cloud.

Identities

- Azure AD identity protection
- Microsoft Defender for identity

Endpoints

- Microsoft Defender for Endpoints
- Microsoft Endpoint Manager

Email and Documents

- Defender for Office 365

Cloud Apps

- Microsoft Defender for Cloud Apps

Infrastructure

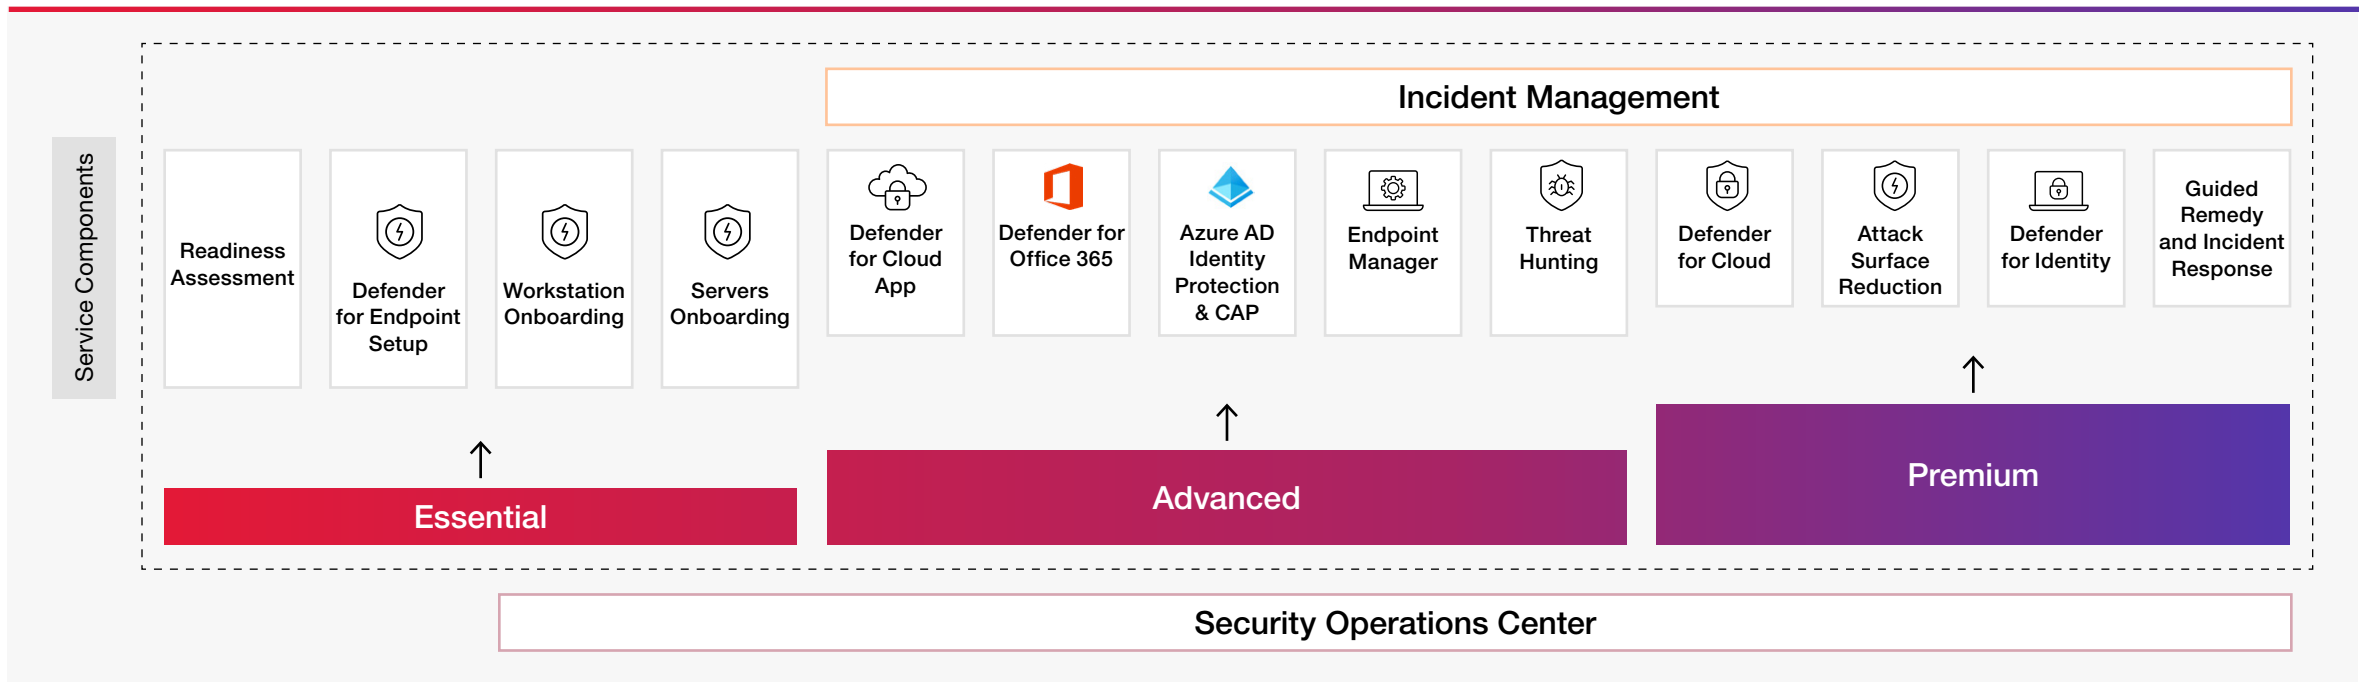

- Defender for Cloud

Select your service tier with Managed Microsoft Defender

Start your security journey with our “Essential” tier; by onboarding Defender for Endpoint to protect workstations and servers.

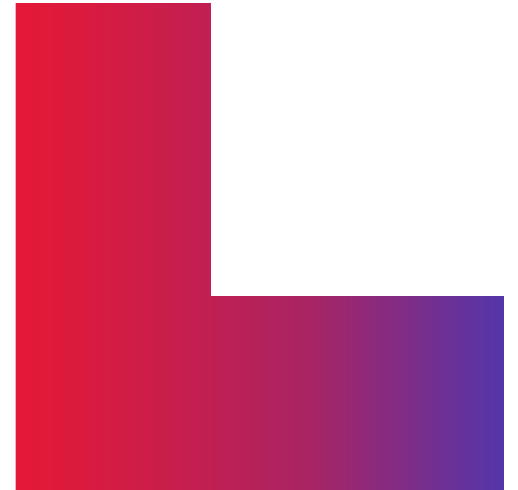

With the “Advanced” tier you can add an advanced threat protection to your email and cloud apps, protect Azure AD identities and threat hunting service that will allow an early detection of hidden threats and identify weaknesses.

As part of the “Premium” tier CGI security consultants will implement attack surface reduction (ASR) rules to harden your endpoints and will enable cloud protection features for your hybrid infrastructure (servers, databases, storage and containers), protection of your on-premise identities with Defender for Identity.

We have your day-to-day covered

Managed security services will make sure you have the optimal best practices implementation of Microsoft 365 Defender and it will help reduce time of detection and fatigue from the explosion of alerts.

What can you expect?

CGI will use industry consulting best practices and its quality framework to identify existing gaps to implement the following:

- Setup and configure Defender 365 based on best practices and recommendation
- Provide orientation and documentation and assess any user impact.
- Manage and remediate detection through integration with our managed security services security operations centers

Due to the broad range of each client's needs, scale and complexity, we work with clients to understand their requirements and provide a firm quote for scope, effort/duration and cost that will ensure their business needs are met.
