

CHECK POINT™

Microsoft Partner

Real-time Protection for Teams, Microsoft 365, OneDrive and more

WITH CHECK POINT HARMONY EMAIL & COLLABORATION

Harmony Email & Collaboration protects users from imminent threats to Microsoft 365 mailboxes as well as collaboration apps such as Teams, OneDrive and more with operational simplicity.

See what customers are saying:

"We have been using Harmony Email & Collaboration for the last year, and during that time we have stopped approximately 1400 phishing attacks.

—Eric Garay, CIO, Technology Canal Bank

WHAT WE OFFER

Harmony Email & Collaboration offers the highest-caliber security to defend users from sophisticated threats to Microsoft 365 and collaboration apps including:

- Real-time phishing protection with analyzation of 300+ phishing indicators with AI engines
- Malware protection with blocking malicious email attachments and files
- Sanitization of potentially malicious files x100 times faster than other solutions with Content Disarm and Reconstruction (CDR)
- Protection of users from malicious links (URLs)
- Data loss prevention (DLP) to maintain compliance

Check Point and Microsoft

Zero Day Protection

Over 90% of attacks against organizations start from a malicious email. Since email attacks usually involve the human factor, your Microsoft 365 environments are your organization's weakest link. With Harmony Email & Collaboration, you have complete protection of Microsoft 365, Teams, OneDrive and more with bullet-proof security. The solution catches what everyone else misses with the industry's best malware catch rate.

Automatic Configuration

When you activate Microsoft 365 Outlook in Harmony Email & Collaboration, you can select Automatic Mode to deploy in minutes and see results within hours, including retroactive scanning for existing malicious emails. You can also enable journaling to send a copy of all scoped emails to the journaling mailbox used by the system for inspection and recording of emails for legal, regulatory and compliance purposes. It can automatically create two connectors that enable mail flow between Microsoft 365 and Harmony Email & Collaboration. Lastly, it can integrate with Azure AD Custom Controls to provide you with an additional layer of identity verification for user access to SaaS applications.

Low TCO

A single license is only needed for both email and productivity apps with all security functionality included, alleviating purchasing and management overhead and providing organizations with an all-encompassing solution in a one-stop-shop, reducing overall TCO.

Cloud with confidence

Check Point and Azure together provide true unified security for sensitive applications, delivered everywhere at speed and scale. Check Point is one of Microsoft's top security ISVs—because CloudGuard and Azure build on each other's strengths to create a security posture that's better together.

Microsoft Azure is an ever-expanding set of cloud computing services to help your organization meet its business challenges. With Azure, your business or organization has the freedom to build, manage, and deploy applications on a massive, global network using your preferred tools and frameworks.
