**QA Recommendations** This is a prioritized list of improvements to practices that will have immediate impact on software delivery

**Implementation Roadmap** This puts everything together by providing with specific action items, timelines, change management of how to implement the recommendations

**Test Cases Management**

Test case is a document, which has a set of test data, preconditions, expected results and configurations, developed for a particular test scenario in order to verify compliance against a specific requirement.

Test case management process involves:

- Creating and maintaining test cases
- Establishing traceability and coverage of the test cases
- Test execution support - test case creation, test execution status capture, etc.
- Automated test case generation for analysis
- Bug tracking/defect management

Test management system (TMS) should be used to manage test cases, assign it within the team, store execution status, mapping with defects and requirements.

Tools: TestRail, Azure DevOps, ZPHYR, XRAY, TESTLINK

**Toolset Recommendations** We will use existing information and research to produce recommendations on the most effective testing tools

**Best Practices Guidance** We will include templates and guidance for what processes, tools, and org structure you will need to ensure the implementation succeeds
