Governance, Risk and Compliance
What is unique about CipherMDR?

MDR Components

Security Incident and Event Management (SIEM) and Log Management technologies deliver fast threat detection and incident response 24x7.

Endpoint Detection delivers efficient endpoint monitoring, either if the endpoints are inside or outside your premises or network. Visibility into threats is communicated in real-time to analysts.

Intrusion Detection System (IDS) delivers efficient network threat detection to monitor suspicious activities happening in your environment. Network traffic is collected and analyzed.

Asset Discovery and Vulnerability Management (VM) focuses on discovering the assets connected to your network and performing continuous vulnerability assessments.

Domain Protection gives you the visibility of malicious Internet domains registered by threat actors that impersonate your company and may be used to attack you, your customers or the public.

Cipher Value

Reliability: We are part of a huge publicly-traded group. Peace of mind can come from knowing that your cybersecurity partner has the resources to make anything happen. Cipher is part of Prosegur.

Experience: Over a thousand enterprise clients from many countries and all industries trust Cipher. We have been delivering from local projects to global-scale projects to mid-size companies to large enterprises.

Capabilities: Scalable operations monitoring over 1 billion security events per day. Exposure and volume create knowledge and intelligence.

Innovation: Cipher Labs is an elite cyber and threat intelligence lab that develops the best technologies and threat intelligence to support our solutions and services.

Highly Certified: Cipher holds the highest level of certifications in the cybersecurity market: ISO 27001, ISO 22301, ISO 20000, ISO 9001, SOC I, SOC II, PCI QSA, PCI ASV and CREST.
