

# Powerful eSigning API for Seamless Integration

**Bring Circularo's secure digital signing capabilities into your own apps, portals, systems and shared service centers.**

The Circularo REST API lets you embed enterprise-grade digital signature workflows directly into the tools your team and clients already use. Whether you're building software, delivering client solutions, or integrating backend systems, Circularo empowers you to automate document workflows and deliver exceptional signing experiences.

## For Developers

### Build and Integrate with Confidence

Circularo's developer-first API is designed for simplicity, speed, and flexibility.

- Comprehensive API documentation and integration guides
- Sandbox environment for testing and experimentation
- Code samples and common use cases to help you get started faster

Start building your integration and bring Circularo into your development workflows.

## For System Integrators

### Automate and Connect Enterprise Workflows

If you're integrating systems at scale or managing enterprise solutions, Circularo's API helps you:

- Trigger document signing from ERP, CRM, HRMS, and other business systems
- Fully manage document lifecycles – from creation to final signed output
- Automate approvals, generate documents, and send notifications based on system events
- Support hybrid and multi-system environments through open and well-documented APIs
- Get help from Circularo support for API-side questions and implementation best practices

Streamline your clients' document processes with smooth backend integration.

## For Partners

### Add Value with Integrated eSigning

As a Circularo partner, distributor, or solution provider, the API empowers you to:

- Embed Circularo functionality into your own platforms or customer-facing portals
- Build industry-specific or vertical integrations for niche markets
- White-label document signing and workflows as part of your solution stack
- Collaborate with Circularo on proof-of-concepts and pre-sales integrations
- Access technical support and guidance for integration planning and deployment

Expand your offerings with seamless, professional-grade digital signing features.

## What's Included with the Circularo API Add-On

- As a Circularo partner, distributor, or Access to production and sandbox environments
- Full documentation, including API reference, guides, and samples
- Typical integration scenarios to help you plan effectively
- Technical support for issues related to the Circularo side of the integration
- Best practices for security, identity, and document workflows

Note: Circularo support is limited to our platform and API; we are unable to assist with third-party systems or code.
