

Microsoft 365 Copilot Technical Readiness

Preparing Customers for Microsoft 365 Copilot

Microsoft Copilot – Technical Preparation

Infrastructure & Data Recommendations

Technical Requirements

- Microsoft 365 E3 or E5.
- AAD / Entra ID based user account.
- OneDrive deployed to all users.
- New Outlook Client (currently in preview) or Web Apps
- Access from Word, Excel & PowerPoint via web version – desktop version coming later.
- Must be using Microsoft teams
- Teams Premium is recommended*
- Microsoft Loop must be enabled.

Data Recommendations

- Core data in Microsoft 365 & Azure?
- Is the good data 'visibility' or data governance in place to control sharing, access controls etc.
- Are data retention policies in use?
- Is Microsoft Purview in use for information labeling and protection?
- Has Microsoft Semantic Index for Copilot been deployed? [coming soon]
- Is there a plan to use SharePoint Syntax?

- Is MFA deployed?
- Do you have Information Governance in place?
- Are your endpoints secure inc endpoint DLP?
- Do you have BYOD configured and is it secure? MAM Policies and CA?
- Will/how will you block non "trusted AI"?
- How secure is your remote access?
- Who defines / reviews your security approach?
- Is your support team ready for AI/Copilot

How we can help customers get "ready"...

Microsoft 365 Copilot Technical Readiness
