The case for simplicity

Adding voice functionality into Teams enables business to have a single application for all their communication needs.

Teams voice typically requires knowledge and expertise in SBC Infrastructure, SIP Trunking and Direct Routing.

Many business do not have these skills in house and as such cannot take this next step.

That's where Teams Calling comes in, Claranet takes care of all the hard work!

Introducing Teams Calling

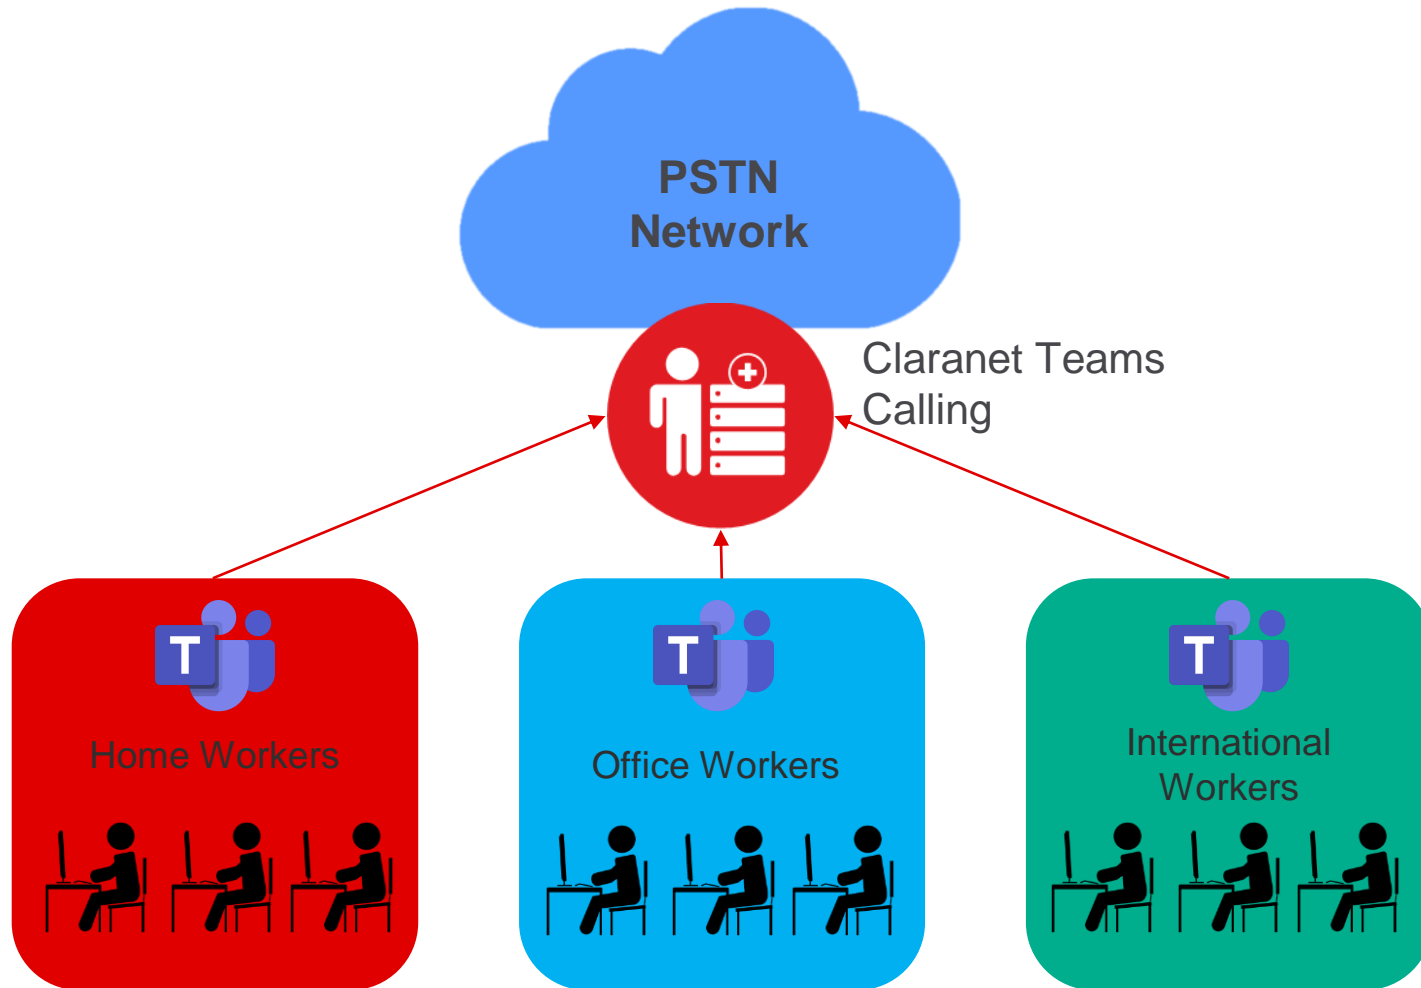

Claranet launched Teams Voice in January 2020, bringing UK calling to Teams users in an all-cloud model.

Our new Teams Calling service allows us to deploy voice calling directly into Microsoft Teams quickly and at a low cost.

What does that mean?

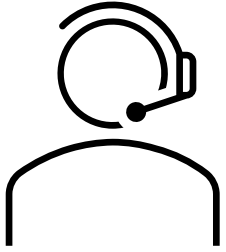

A local phone number, from anywhere, that rings your user's Teams app.

A simple but effective telephony service suited to organizations with basic calling needs.

Enables Teams to become a true communications tool.

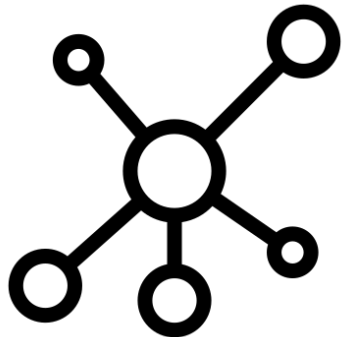

The benefits!

A single telephony service for users who require basic calling – all via Teams. No need for telephony systems or complex infrastructure, reducing overheads and simplifying management.

Maximise your Microsoft license investment by utilising the Direct Routing capability of Microsoft365. No need for Microsoft's complex Calling Plans and Communications Credits.

Utilise Teams' intelligent networking to use local internet access to reach Microsoft's Connected Edge, optimising voice quality and user experience at no additional cost.

Teams + Voice?

Teams Calling with Claranet

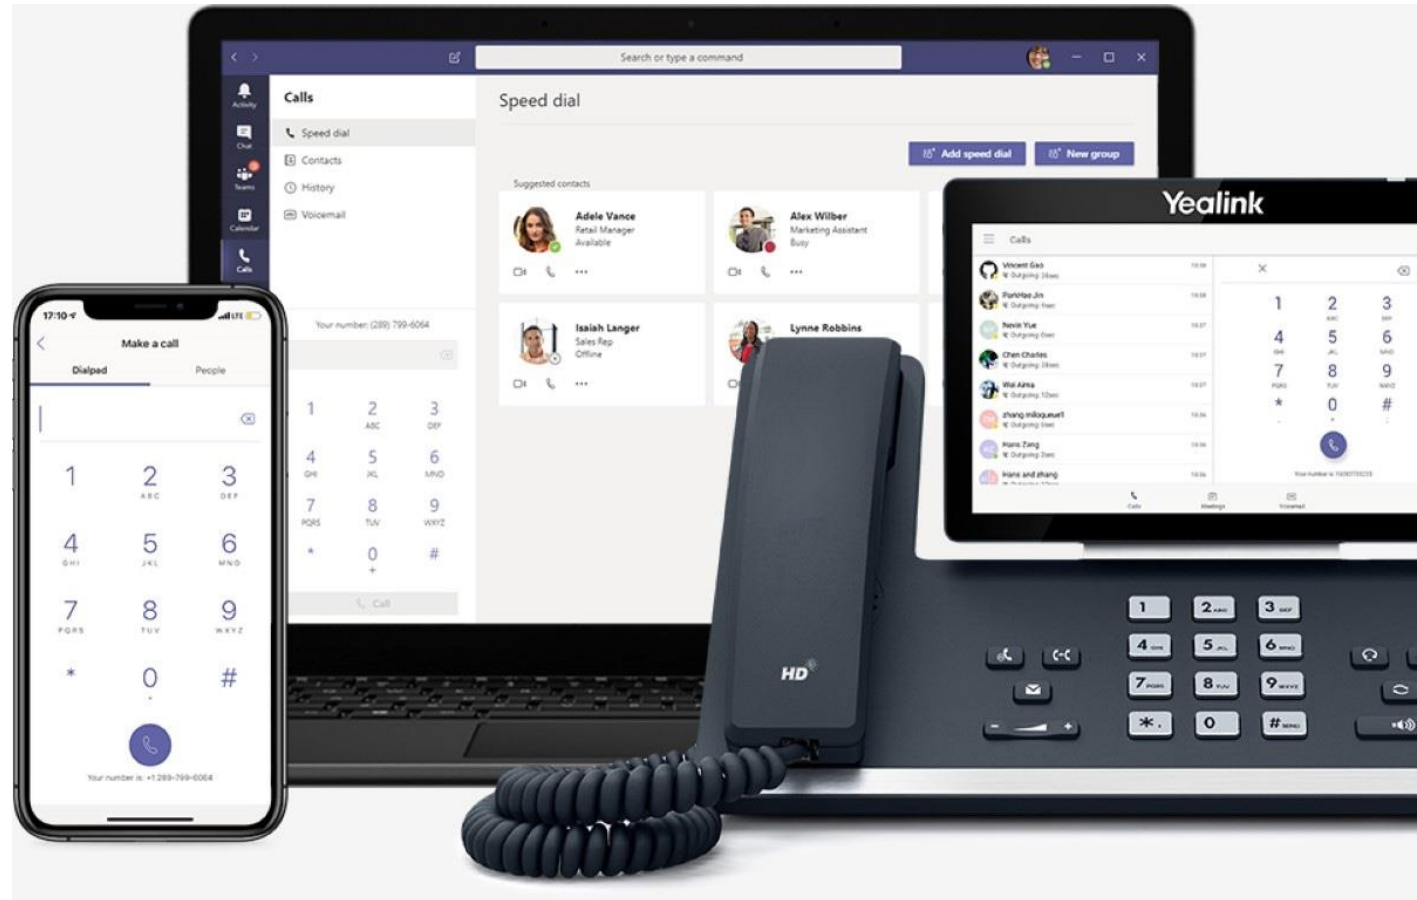

Simplify communications with an all-in-one solution

Call from anywhere, on any device

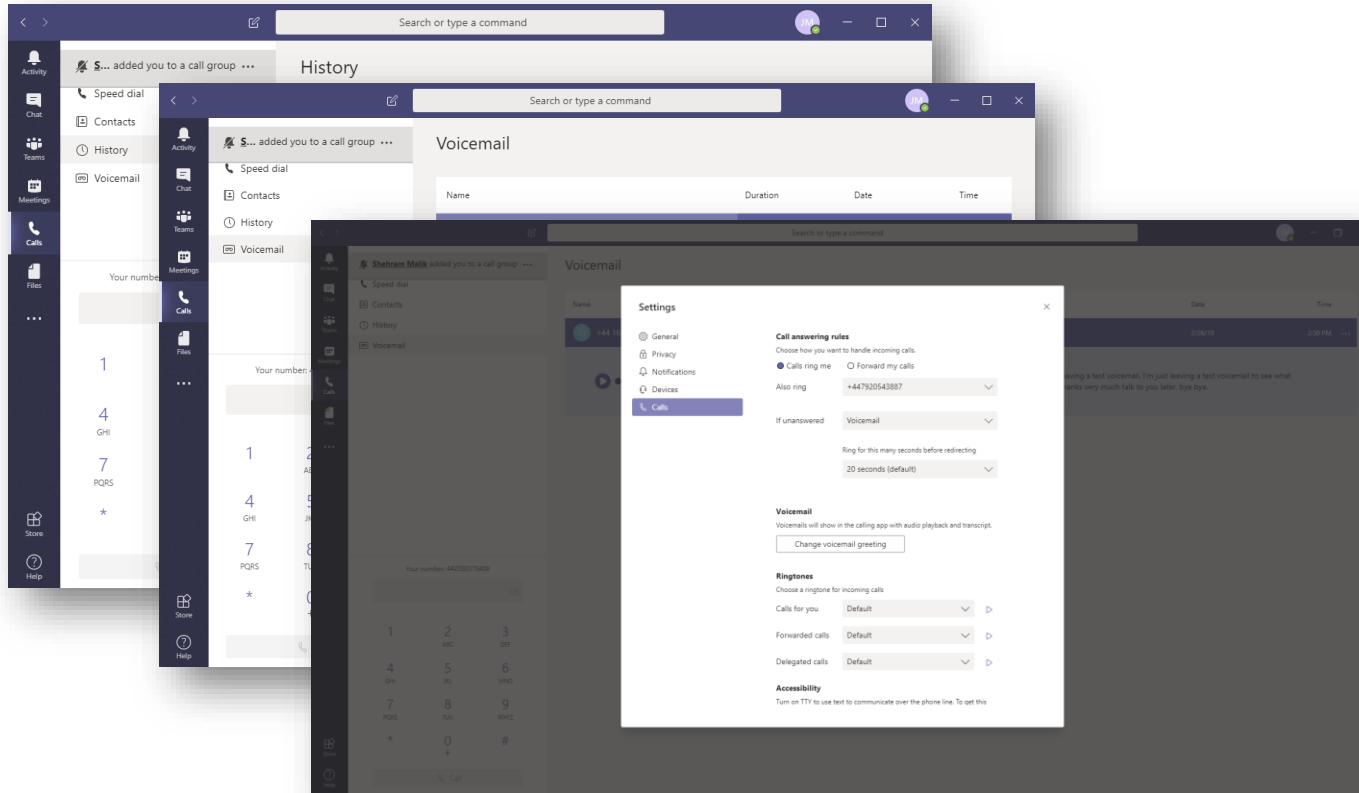

Secure, reliable, and rich calling

Streamline management
