

# Data Platform Services

## Managed and professional service

 Analytics Specialisation on **Azure**

 **50+** Data Experts

 **Skills in Azure, AWS, Databricks, and more**

## Outsmart – don't outwork

Data is more than just cold logic – it's a powerful tool for creativity and innovation, and many organisations are sitting on valuable insights that are waiting to be uncovered. Tapping into your data's potential doesn't have to be difficult and with the right approach, your data can start to work for you.

By collaborating with you to identify the right use cases for your data platform, your investment is tied back to your business and built for you instead of adopting an off-the-shelf offering.

We offer the end-to-end deployment and management of your data platform through our **Managed Data Infrastructure, Data Engineering, and Data Analytics** services, and this means we can provide flexible management solutions that are designed and tailored for your organisation.

### Assessment

- Uncover hopes, fears, business context, objectives, pain points, and headline issues
- Define up to 5 use cases that are each linked to a business objective with KPIs
- Report detailing governance, security recommendations

Output: Action Plan

### Design

- Identify critical data sources and required infrastructure
- Security and Governance requirements
- High level conceptual data model
- Configuration requirements across DevOps, lifecycle management, source control, pipeline monitoring and more

Output: High-level design

### Deploy

- Landing zone, network architecture, cloud services, Data cloud infrastructure, and tooling deployment
- Automated deployment via Infrastructure as Code wherever possible
- Test the solution against pre-defined acceptance criteria

Output: Data Platform

### Transition

- Data migration
- Validation and testing of disaster recovery
- ITSM tool integration testing
- Configuration adjustments to meet expectations and acceptance criteria
- You can choose to have the platform managed by Claranet, or have it transitioned back to you for management

Output: Managed Data Platform

## Benefits

- ✓ Link your data platform use cases to your business objectives and Key Performance Indicators, improving investment return
- ✓ End-to-end delivery with flexible management options suited to your specific needs
- ✓ Start with the end-user and business in mind to deliver impactful, tangible benefits
- ✓ Support scalable and sustainable business and data growth
- ✓ Flexibility that enables the platform to be changed easily, cutting out the friction that can come with change
