Data Services

A modern architecture to accelerate your data journey

Data is your most valuable asset, but only if you know how to unlock its value!

A data platform is the foundation on which data-driven organisations thrive. Deeper insights fuelled by modern capabilities empower smarter real time decisions. But a key challenge is that the data remains inaccessible. Silos in data, applications and inconsistent analytics mean few organisations get the value they need from their data.

Claranet's Data solution leverages the latest Microsoft Azure technologies, architecture and implementation approach to deliver a scalable foundation and end to end connected ecosystem, that is ready to provide actionable insights through analytics and help build the future of your business.
Typical use cases

Modernise your existing environment

- Migration of an existing database to a cloud platform
- Cost effective and flexible data storage compared to on premise storage
- Fully managed platform

Centralise your data storage

- Cloud storage solutions including data lakes and warehouses
- Collection of data from multiple sources
- Integrate data from alternative sources

### Anticipate the future of your data

- Build a foundation by preparing and making data accessible for data analysis and AI
- Enable data to become a strategic asset
- Data expertise to help you accelerate your data approach

OUR PROVEN SIX STAGE PROCESS

1. Scope. We run a thought-provoking and ambitious workshop to understand your current pain points, future objectives and identify your use cases.

2. Design. Let us create the plan. Our experts will assess your current state and create a future proofed design that meets the needs of this project as well as your long term needs.

3. Build. Working in an agile way, we create a modern data platform that can ingest, store and prepare your data so it's ready to use.

4. Analyse. We build the data pipelines and processes that turn raw data into actionable insights that answer critical business questions.

5. Visualise. Understand the data, improve decision making and explore trends with beautiful dashboards.

6. Operate. We keep your data platform running smoothly 24/7, optimising for cost and performance and supporting your next initiative.

We are experts in data, applications and infrastructure

- **Multi-cloud specialists**
- **+360 Public Cloud customers**
- **+100 Data Services customers**
- **+140 certified Public Cloud engineers**
- **+80 Data modernisation experts**
- **+1200 technical experts**
- **7x Gartner Magic Quadrant Leaders**
- **Enterprise standard support**
