Class Analytics

Student Growth Reporting

Designed for Victorian Primary Schools

Measure Student Growth

Make cross-curriculum comparisons

Our reports have been designed in collaboration with Victorian school leaders to ensure absolute focus on their data needs and report usability
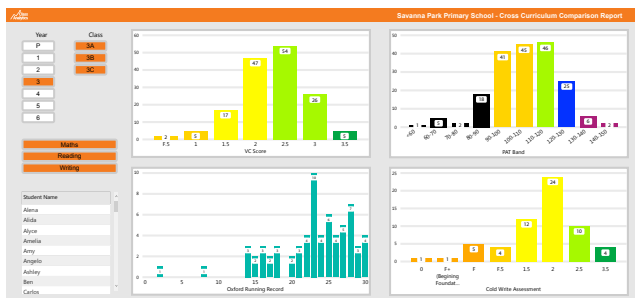

VICTORIAN CURRICULUM AND ASSESSMENT AUTHORITY

Make data-driven decisions, measure results

Our reports have been designed specifically for Victorian Primary Schools. We help reduce workload and increase productivity by automating and simplifying the collation of data for teachers and school leaders

Our reports improve teacher data literacy with easy-to-use dashboards Filter your student information any way you need to support decision making and lesson planning.

Gain fast and targeted insights

Our reports help school leaders answer key questions such as:

- Which students had no growth over the last 6/12 months?
- How is my class is performing against the cohort?
- How successful has the English Implementation Plan been?
- What is the academic level of the entire school?
- Does Absenteeism correlate to low student growth?

Use any data source

Every school is different, every school uses different combinations of assessment tools and applies them in unique ways. This makes combining data into a single report much more challenging. Our solution joins data from multiple, often very different data sources.

Thes common data sources include:

- VC Scores*/NAPLAN
- PAT / ACER results
- ICAS reports and results
- Cold Write Assessment
- Reading records
- Paper-based

* Our reports are compatible with your existing VC files from CASES21, submit the same files to us and your reports will be updated automatically

Software-as-a-service

Class Analytics stores all sensitive and identifiable student data securely in Microsoft Azure. Our cloud-based services are maintained in Australian Datacenters so your data never leaves country. We comply with all state and national data protection policies and guidelines.

Microsoft Azure
