Security Copilot Assessment with Cloud Intel

Empower Your Security Team with Copilot!

Microsoft Security Copilot is an all-in-one virtual assistant that leverages the power of AI to augment your workflow. Copilot extends its capabilities across a broad spectrum of cybersecurity fields, from reporting to compliance monitoring.

To use it effectively, you need a strategy and an appropriate roadmap. **Click2Cloud can help you dive into the world of AI and get your business prepared for Security Copilot.**

Our AI-based assessment platform, Cloud Intel, facilitates Security Copilot Assessment, enabling you to experience the transformative potential of next-gen AI in cybersecurity—a whole new way of working.

Cloud Intel's Security Copilot Assessment helps you learn how security copilot works and what to consider while using it. It provides a better understanding of AI's potential and its effect on cybersecurity. It evaluates your current capabilities, identifies your goals and challenges, and provides you with a roadmap for the successful adoption of Security Copilot.

What You Will Get from This Assessment

As part of our Business Value Assessment (BVA), you will receive a summary of the assessment findings, including:

A thorough analysis of your current security environment and a critical gap analysis

Benefits analysis quantifying the potential benefits of using Security Copilot

Licencing and security overview

An outline of the estimated costs, TCO/ROI

Security Copilot integration strategy and roadmap

Next steps recommendations

Cloud Intel's BVA results help you achieve productivity gains, improved security and data permissions, simplified modern IT infrastructure, and seamless integration of security Copilot in cybersecurity work.
