

Sustainability Assessment and ESG Solutions with Cloud Intel

Overview

Today, sustainability has evolved from a buzzword to an imperative concept for success. However, the flexibility of cloud services presents both opportunities and real challenges in terms of measurement, budgeting, and more.

At Click2Cloud, our AI-ML-based product, Cloud Intel, provides sustainability assessment, actionable insights, 5R strategy and a roadmap for your sustainability initiatives. It analyses your infrastructure's baseline carbon emissions, energy usage, water consumption, and e-waste and helps you measure and monitor key sustainability performance indicators tied to your business KPIs. It also helps you optimize your sustainability efforts and compare the ESG impact of on-premises vs. cloud deployments.

Click2Cloud's Approach

- Assess the current landscape's sustainability maturity and determine a route to net zero
- Reduces ESG impact and develops an efficient cloud approach
- Achieve sustainability goals with 5R strategy
- Seamlessly integrates and analyses data to meet standards across Scope 1, 2, and 3 emissions
- Optimize your sustainability efforts and compare the ESG impact of on-premises vs. Azure cloud
- Evaluate existing initiatives on the cloud and identify matching opportunities

Sustainability Approach | 5R Strategy

Challenges

Identifying social, environmental, and governance business challenges and opportunities

Leveraging optimization opportunities in the cloud

Measure and monitor key sustainability performance indicators

Tracking and Comparison of key sustainability metrics
