Real-time analytics with ClickHouse

With ClickHouse, you can ingest millions of rows per second and handle the most heavily concurrent workloads. All without compromising query speed.

→ Create highly interactive user-facing applications with instant responsiveness

→ Run SQL-based analytics effortlessly on your most diverse, high-cardinality datasets

→ Seamlessly integrate static or streaming data from a wide range of sources

→ Use your favorite visualization tools like Grafana, Tableau, Superset, and more

- Best-in-class query performance
- Built for continuous ingest
- High query concurrency
- ƒ(x) Powerful domain-specific functions

❝ ClickHouse helps us efficiently and reliably analyze logs across trillions of Internet requests to identify malicious traffic and provide customers with rich analytics.

CLOUDFLARE

❝ We have multiple clusters deployed on our hardware with hundreds of hosts. Many of our tables are quite large, with trillions and trillions of rows, as well as tens of columns.

ahrefs

❝ Last time I checked, we read two billion rows a second of CDN access logs.
