Clinical Excellence Algorithms

WHAT IS CLIEXA?

cliexa® aims to improve quality of care, clinical workflow, income generation, time spent with patients and reduce liability concerns. This is achieved through the utilization of patient-reported outcomes and implementing customized intake, screening, and remote monitoring tools that fit their clinical setting.

HOW DOES IT WORK?

DIGITAL INTAKE + SCREENING (IN-CLINIC)

Consent forms, ROS, medical history, social history can be streamlined into the EMR from the patient's home or in the waiting room. This function will close the gap in clerical errors and serve as a safety net for when a provider forgets to elicit additional questions from the patient during the encounter or enter it into their notes.

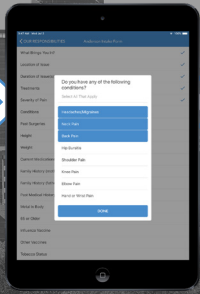

REMOTE PATIENT MONITORING

Enable patients and physicians to track disease activity remotely and leverage our algorithms that makes intelligent correlations between medication dosage, frequency, and heightened or reduced symptoms. The system allows patients to connect to and pull in wearables data, as well as, specified claims data to correlate and communicate events and daily activities to their physician.

EMR INTEGRATION

cliexa's proprietary integration services along with the reference data and storage services, web services can bi-directionally integrate with Electronic Medical Record (EMR) systems via FHIR, HL7, File Services, Email and SMS. With direct integration, policy makers have access to healthcare costs and claims data. This process utilizes disease activity, calculated from in-app assessments, and associated CPT codes generated real-time to your MIPS quality tables through the integration.

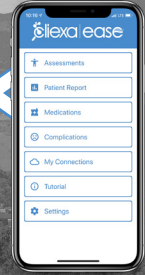

Digital Screening

EMR Integration

Remote Monitoring

MODULARITY IS KEY TO INTEROPERABILITY

Patients track their health status remotely and connect wearable devices to gather quantifiable data. Patient data is reviewed by the clinician and integrated into the existing EMR system. The platform provides clear and concise documentation of medical records, which maximizes reimbursements for providers without dealing with compliance issues.

Medical History

Easily pull data from multiple EMRs and maintain medical history with a multi-directional exchange of data.

Consent Forms

Automate the consent form process upon intake via tablet or mobile phone and eliminate the need for paper documentation.

Clinical Assessments

Enable your customized digital library of clinically validated assessments to gather quality patient-reported data directly into your EMR.

Connected Device Data

Through API connectivity, patients can sync up their IoT and wearable tools to deliver valuable, real-time data into their electronic medical record.

Payor Claims Data

By enabling online payor accounts the clixa platform, synchronizes hospital and patient data through a secure, HIPAA-compliant cloud infrastructure.

Medication Adherence

With push notifications, remind patients to adhere to their medication and stay on top of any changes or side effects and complications.

The transition to a digital patient intake has given us more opportunities to help our patients than we had envisioned... Our patients have spent less time in the waiting room with more time delegated to their doctor visit.

- Erik Seyler, CEO of Anderson Podiatry Center

STREAMLINED FOR REIMBURSEMENT

Leaving out important parts of the documentation will lead to a lower level of service in billing and lower reimbursements. To mitigate this issue, cliexa offers screening and compliance tools that are already integrated on the platform.

Advance Care Planning

Advance care documents can be made readily available in the clinic or remotely on the patients mobile device to document their wishes

Chronic Care Management

Tailor-made solutions for specific chronic patient populations to enhance current practices through documented, data-based decision making

Evaluation & Management Services

Integrated digital forms & assessments pushed directly into your existing EMR system for providers and payors

Population Health Management

Collect and analyze patient data based single or multiple disease states to provide a comprehensive clinical picture for providers to improve clinical outcomes and lower costs

Preventative Care Management

Track patients lifestyle habits and enable them to respond more quickly to new data, preventing further issues in treatment plans.

Remote Patient Monitoring

Allow patients to send personal healthcare data from their phones to their providers, covering a range of conditions and complications with their ongoing treatment

“The cliexa platform makes electronic health records and documentation more efficient.”

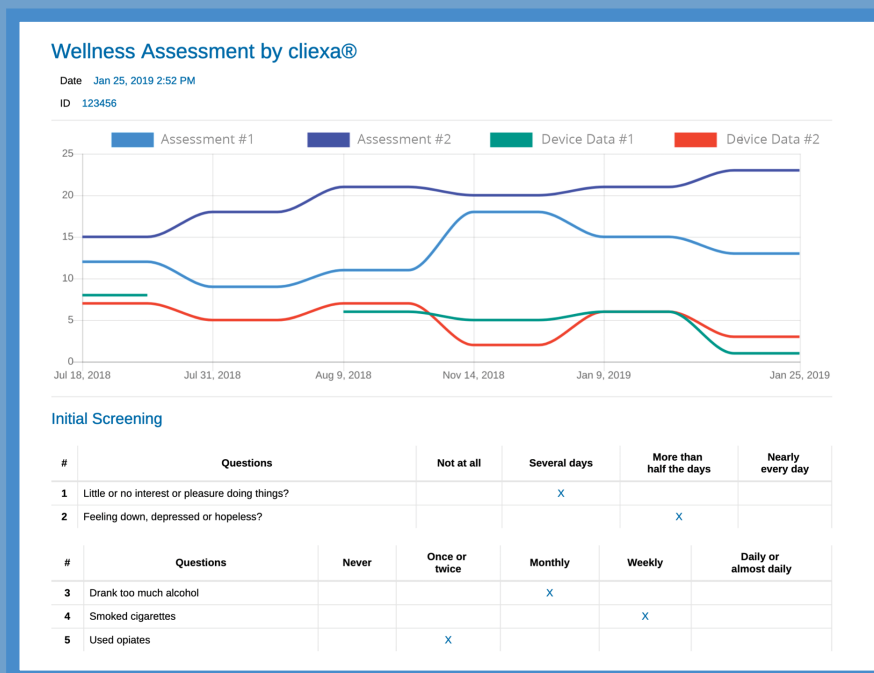

- Robert Spencer MD, Colorado Arthritis Center

BUILT FOR QUALITY & COMPLIANCE

Healthcare providers now face increasing pressure to get documentation right while delivering quality patient care. This shift creates a need for a cross-communication platform like cliexa, to foster collaboration between patients, providers, payers, and key stakeholders involved in the health-care system in order to quantify and qualify patient-reported outcomes (PRO). This data assists providers by responding more efficiently to changes in baseline metrics, so their patients will have a more targeted and timely treatment, potentially resulting in fewer complications.

Physicians need an automated process that can quickly categorize the nature of the visit, which is offered in the cliexa platform with our coding compliance programming. cliexa brings increased efficiency to your practice by:

- Streamlining documentation via EMR integration for audit protection and compliance
- Allowing customizable built-in surveys and questionnaires to improve your MIPS score
- Improving physician-patient communication

COLLECT MULTI-COMORBIDITY DATA

Having a strong patient medical history component in the physicians' note lays the foundations for justification for office visits, labs, or imaging services rendered. This is where cliexa comes in, allowing patients to fill out clinical assessments outside the hospital or clinic walls.

This is especially important for **chronic care management (CCM)** patients because we can capture the trend of the patient's disease progression, using reliable and objective data. As data accrues while a patient documents their symptoms improving or worsening, clinicians can intervene or change management as necessary. When further lab work or imaging is necessary, it will already be justified and deemed "medically necessary" with trending data, thus decreasing the potential for billing rejections from payers. This real-time data is sent through a HIPAA-compliant, HITRUST certified cloud infrastructure and then to the clinician's EMR system, with no disruption in workflow.

cliexa data assists providers by responding more efficiently to changes in baseline metrics, so their patients will have a more targeted and timely treatment, potentially resulting in fewer complications or side effects. The specialties covered by the cliexa platform are currently behavioral health, cardiology, chronic pain, COPD, diabetes, IBD, mental health resiliency, and rheumatoid arthritis.

 RESPIRATORY DISEASES

 PAIN, MENTAL HEALTH, PREVENTATIVE CARE

 DIABETES

 INFLAMMATORY BOWEL DISEASES

 ADOLESCENT RESILIENCY

 CARDIOVASCULAR DISEASES

 RHEUMATOID ARTHRITIS, FIBROMYALGIA

 MENTAL HEALTH, SUBSTANCE USE

NO DISRUPTION TO WORKFLOW

DISCOVERY PERIOD

Meet with practice administration team to identify the intake process and reimbursement framework
1 hour

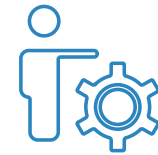

Meet with clinicians to identify the clinical workflows for intake and remote monitoring
1 hour

PILOT PERIOD

Execute BAA, drop off tablets customized with clinical assessments and intake process using HIPAA-compliant file.
Within 1 week of clinician meeting.

Implementation of clinical flows to the EMR or other secure file storage locations hosted by the clinic/institution
within 2 weeks.

PRODUCTION PERIOD

Complete security and privacy review and integrate with EMR if applicable.
2-4 Weeks

cliexa support staff will be on-hand to answer questions, address technical challenges, and continue the customization process in production.

READY TO GET STARTED?

Send an **email to info@cliexa.com** or **call (252) 543-9217** to request to demo of the cliexa platform. There are no upfront costs and we can provide a risk-free trial with no disruption to your workflow.
