

ADA PLATFORM

ADA PLATFORM

Mixed Reality
Microsoft
Partner

Clirio Technologies, with their commitment to innovation, has created the Ada Platform to turn our experience and knowledge of client project data into action. Ada combines terrain and survey data, engineering designs and real-time computer graphics to visualize applied earth science projects in high resolution, detailed 3D holograms via the Azure Cloud and HoloLens 2. With this solution, experts and non-technical stakeholders can visit a digital version of their project site from anywhere in the world in a remote collaboration session. Ada enables us to walk through a past, present or future landscape, facilitate subsurface visualization, and represent time, space and vector data.
