

Sales dashboard in 5 days

Do you need a fast and accurate way to track your sales? Power BI is the best way to achieve this. Thanks to its clear reports you can easily track which products are selling great or which sales representatives are underperforming.

Our team of BI specialists offer a Power BI set up that will allow you to make smarter decisions based on data, and be more reactive to current trends or events relevant to your market.

Roadmap

To get a clear view of the required data and specific needs of the end user we would start with a short analysis where we will take a deeper dive into your organization.

Technical Analysis

With the help of technical staff, who have a clear understanding of the current data architecture, we will map the necessary data connections. This way we will have a clear view on how to access the data and connect it to Power BI in order to integrate it seamlessly in the current dataflow.

Business Analysis

With the help of end users, we will zoom into your reporting needs. We will start by looking at your current reporting method to find out what the goal of these reports are, what works?, what doesn't?, which elements get used more often?, which elements are redundant?, what are missing elements?, what are your KPI's?, what are your priorities?. After the workshop we will prepare a mock up using all the information we gathered from the end users.
