Copilot Rapid Adoption

Get started with Microsoft 365 Copilot

Embrace the future of productivity with Microsoft 365 Copilot, the AI-powered technology every business is talking about. This rapid adoption service will get you started with an assessment and roll-out plan to demonstrate the benefits of Copilot to your business.

Readiness Assessment

✓ We will help you understand how your current processes and governance practices could present a risk if you enable Copilot without reviewing and implementing data governance tools.

✓ Ensure you have deployed the technical prerequisites so that your Microsoft 365 configuration supports a Copilot roll-out.

Adoption Materials and Workshop

✓ Provide communication and reference material to ensure the core features can be adopted quickly and effectively, allowing the value of the investment to be realised.

✓ Guide your identified users from day one with an overview of the capabilities and advice on how to make Copilot work for them.

Data Protection and Governance

✓ Enable baseline Data Loss Prevention and sensitivity labelling policies to reduce the risk of data egress.

✓ Inform users of their responsibility to ensure the data produced, returned or utilised by the Copilot toolset is accurate.

✓ Ensure that highly sensitive or protected data is managed effectively during the initial deployment.

Licensing and enablement benefits

✓ Included within the cost of engagement is 12-month of Microsoft 365 Copilot licensing for up to 10 users.

✓ As part of the roll-out, Cloud Direct will procure, allocate and activate the licences.
