

Windows Virtual Desktop

Boost your organisation's productivity and resilience with Windows Virtual Desktop.

Whether you're new to Azure or already running workloads, Windows Virtual Desktop (WVD) is the solution for remote working to build resilience in your business continuity plans and keep your organisation productive in any situation.

- Increase productivity working any where on any device
- Protect business continuity by operating from any location
- Attract the best talent through modern working practices
- Utilise cloud technology to save costs and improve performance

Complete peace of mind

As a complete solution for desktop and application virtualisation, WVD provides your workforce with the same office working experience, in any location and on any device. What's more remote working helps business continuity if your office environment is compromised.

How can we help?

As an Azure Expert MSP, we have the expertise and experience to ensure your WVD deployment meets the requirements of your business in a cost effective and secure way. We have three plans to help you deploy:

WVD Rapid Deployment Service

For those who require a fast and cost effective implementation of WVD up to a maximum of 50 users. The Rapid Deployment will provide you with all the essentials you need to work remotely. This could be used as an initial phase to a larger project or a POC.

WVD Advanced Deployment Service

This solution covers all the requirements you may have and ideal for those who need to deploy a solution across many user types, networks and applications up to a maximum of 400 users.

WVD Enterprise Deployment Service

Greater than 400 users? No problem the Enterprise Deployment service caters for any user number across multiple regions including multi-site engagements.

What will we do?

All our Windows Virtual Desktop plans follow the same structured delivery process to help you cut through the noise and simplify your remote working project.

Discovery & Design

As part of the discovery & design phase together, we will map your business requirements per department or role and design your WVD deployment around these. Additionally this phase will identify the Azure environment requirements and provide a cost estimate for your monthly Azure spend. For the Rapid Deployment Service, an essential list (or set of testing objectives for POC) for remote working will be defined in order to get you up and running quickly and efficiently.

Deploy

At the deploy stage, we will use our findings to deploy a WVD environment that meets your requirements. Making certain that it is optimised across performance, cost and security. Our architects are experienced and highly skilled in WVD with the various certifications and accreditations that come with working for an approved Azure Expert MSP partner - be safe in the knowledge that your deployment will be conducted to the highest standards.

Roll-Out

Once the deployment is complete we will train your admin users and provide documentation of your solution. Furthermore to this we will complete functional and UAT testing to ensure you are fully comfortable with your end solution. For end users we will check the ability to log in and help them to understand how to access their desktop to minimise any disruption to your everyday business activities.

Say hello to a more productive, collaborative and resilient workforce by deploying Windows Virtual Desktop with Cloud Direct.

Contact us today to find out more and speak with one of our WVD experts.

Azure
Expert
MSP

Why choose us?

As an Azure Expert MSP, Cloud Direct have worked with organisations to successfully migrate to the cloud. Microsoft has recognised just 32 partners globally that meet the standards to be an Azure Expert MSP. And we're proud to be one of them.

We're also a gold Microsoft Cloud Solution Partner (CSP), having achieved key certifications and competencies, including Gold Cloud Platform and Gold Data Centre, that enable us to provide expert advice about Microsoft Cloud technologies.

Cloud Direct helps ambitious organisations to adopt Microsoft cloud. Our clients know that the right technology can free them to grow – offering increased security, productivity and agility. But they also know caution. Our job is to make their cloud journey safe and affordable.

Since 2003, Cloud Direct has helped 4,000 organisations move their IT to the cloud. We hold ISO 27001:2013 (for security) and ISO 20000 (for service). At 75%, our Net Promoter Score is world-class, and we provide 24/7 support to ensure continuous service delivery
