Cloud Direct®

Security Operating Model Optimisation

Strengthen your security readiness with practical insights and real-world testing

Gain security readiness and valuable insights through our Security Operating Model Optimisation. This service equips your team with practical, actionable steps and clarity on response effectiveness, helping you feel more prepared and confident in handling security incidents.

We conduct targeted interviews to gather information on your current security structure, objectives, and response strategies, focusing on the following areas:

Business Needs

Understand your organisation's structure, key roles, and responsibilities.

Operational Insights

Capture details on policies, IR procedures, and tools.

Scenario Planning

We plan a security scenario customised to your environment (either a live simulation or a real-time walk-through).

Planning & Pre-Readiness

Cloud Direct ensures all prerequisites and permissions are set for a smooth, efficient test run.

Security Operating Model Optimisation covers:

How Adopt Advisory Services works

Current State Review

An expert analysis of your Incident Response (IR) procedures, showing how well they perform and where there's room for improvement, using simulated security events tailored to your security needs.

Performance Testing in Real Scenarios

Real-life testing and clear metrics to see how your team would handle potential incidents. These controlled exercises, guided by Microsoft tools and our experts, allow your team to identify strengths and areas of improvement in a risk-free way.

Actionable Report

A straightforward, detailed report that breaks down your security model's effectiveness. You will get recommendations, actionable steps, and trackable results to support ongoing improvements in your response processes.

Operational review

A broader review of the people, processes, and technology involved in your IR approach, highlighting any gaps and offering practical recommendations for creating a more resilient security strategy.

Final Report & Recommendations:

You will receive a comprehensive report that includes a clear gap analysis, recommendations, and a structured plan for enhancing your IR processes.

Simulation/War Games Exercise:

In a two-day, in-person session, your team will experience:

Scenario A:

Controlled Incident Testing – A live, controlled incident to test response. We will capture response metrics and add challenges to assess adaptability.

Scenario B:

Incident Walkthrough – A real-world walkthrough with your team in a roundtable format for practical insights without live faults.
