

Managed Secure Score

With cybersecurity threats constantly evolving it's crucial for organisations to keep themselves protected. Managing your security posture provides ongoing reassurance that your IT environment remains safe.

Understanding your posture

Secure Score is a Microsoft initiative to give customers visibility and control over their organisation's security. The live score is calculated by evaluating usage behaviour and security settings across identity, devices, data, apps and infrastructure in Microsoft 365.

Keep pace with change

Security is a moving target. Once you upgrade to advanced Microsoft 365 licensing you will immediately see your Microsoft Secure Score increase due to the wide range of features available in your new toolkit. But this isn't indefinite. Maintaining a high security posture is only achieved through regular monitoring and promoting best-practice usage habits.

Our close relationship with Microsoft gives us direct access to the latest security and compliance updates, so we can apply the right measures to your environment.

How does it work?

It's simple. We will manage your security posture through regular checks, remediation and reporting to keep you informed and on top of your security management.

What do you get?

As part of the Managed Secure Score service from Cloud Direct, you will receive:

- A weekly Secure Score dashboard
- An overview of what's changed, where specific items have improved or regressed
- A summary of actions taken, areas of concern and further recommendations
- Industry benchmarking
