

ML Framework Overview

"Cloud1 ML Framework includes not only MLOps but also management methodology, automated environment establishment and model refactoring & deployments capabilities."

"When ML Framework materializes fast CI/CD cycle is met, quality of models is assured and real business value from ML models is achieved"

- By giving the right tools to data scientist, standard practices are easier to follow and real value to business making pipeline is generated
- Ease and automate cumbersome and boring deployment process
- Realizes the value of your ML models and improves the quality of ML solutions in production
- Streamlined and standardized development, deployment and production of ML models
- Enabling faster ML experimentation, development and deployment
- Framework includes data scientist platform Azure ML Services, Azure DevOps enabling faster and smooth deployments and analytical engines to power heavy ML computations
