# V-Card

For users outside of Active Directory,
the Administrator can enter the username one by one.

For customers using Active Directory, it is possible to
directly upload the file and generate batch QR code.

QR codes can be created for all users at the same time.
QR code can be created in jpeg, png, svg, webp format.

Logo can be added from settings in V-Card creation. So there can be a logo in the middle of the QR code.
QR code can be added to business cards.

If someone's title changes in Active Directory, synchronization should be done in QR code application.
In this way, the title will be updated when the QR code is read again.
