

Microsoft 365 Backup

Full data protection for Microsoft 365

The biggest threats to data stored in Microsoft 365 are ransomware and accidental or malicious deletion by users

A scalable approach to Microsoft 365 backup

As Microsoft 365 adoption grows protecting your data is essential, and the recycle bin can't always be relied upon for efficient restoration.

The need to backup...

- Protect against accidental or malicious file loss
- Align with the shared responsibility model as advised by Microsoft
- Make granular restores efficient
- Bolster capability with the modern convergence of archiving, backup and e-discovery

Reliable Backup

- Seamless integration with Microsoft 365 API
- Bulk backup of entire SharePoint libraries

Instant flexible recovery

- Restore data in bulk or only the files you specify.
- Restore to its original or an alternative location
- Use point in time recovery

Full control

- Set up policies and permissions
- Host in a cloud region for residency control

"Cloud Essentials has delivered a reliable solution, delivering protection of our Office 365 data and supporting our litigation and GDPR requirements"

Steven Menmuir, Solutions Architect at Repsol Sinopec UK
