Microsoft 365 Security Assessment and Roadmap

Identify and remove the roadblocks holding your security journey back.

Microsoft's comprehensive approach to security means you have access to powerful capability to safeguard your organisation through integrated security, compliance, and identity solutions.

In our experience, the key to getting the most from Microsoft's capabilities is to view security as a journey, not a destination. We're here to help you map a route that removes all roadblocks and delivers maximum possible impact from day one.

We'd love to discuss your security maturity and journey. Contact us for a no obligation discussion about your requirements.

Good security is a journey

We'll work with you to understand your **unique security requirements** and the people, processes and technology you have in play. We can **then identify any gaps and inefficiencies based on industry best practices** like Microsoft's Zero Trust security model.

As Microsoft cloud security experts, we specialise in creating **practical, actionable security strategies** centred on Microsoft's native capabilities.

Assess, align and accelerate

We combine an assessment with a workshop so that you're left with actionable insights based on data, business context and input from experienced specialists.

The outputs of the assessment and workshop are:

- **Documented decisions**, considerations and recommendations
- A **risk based action plan** for security improvements
- The **priority order of deployment initiatives** to scope
- A **sense of readiness** to embark upon the detailed design and deployment process

Springboard for action

The assessment is designed to propel you straight into deployment based on the roadmap decisions. You will be able to:

- **Visualise where you're heading** with the technology so you can communicate better with all stakeholders
- **Set realistic expectations for progress** against timeframes and a logical sequence to deployment
- Prepare for and **influence budget decisions**, such as upgrades in licensing or resourcing
- **Document decision making** as a record of progression and your commitment to security and compliance
- Have **peace of mind** that your decisions are founded on accurate and full information
