365SecurityREADY For Enterprise

Elevating Your Cloud Security with Microsoft 365

Cyber risks are major concerns to businesses today. The growing number of endpoints, tools, data storage being used across enterprises is leading to a rapid expansion in the attack surface, which many businesses are struggling to monitor & secure, and adhere to the ever-increasing data governance & compliance needs.

365SecurityREADY – for Enterprise is a pragmatic approach combining consultation, technical implementation and fully managed services* of Microsoft 365 Security features, in a sequence of steps that ensures protection of enterprise data across Microsoft ecosystem, adherence to regulatory requirements and simplify operational complexity.

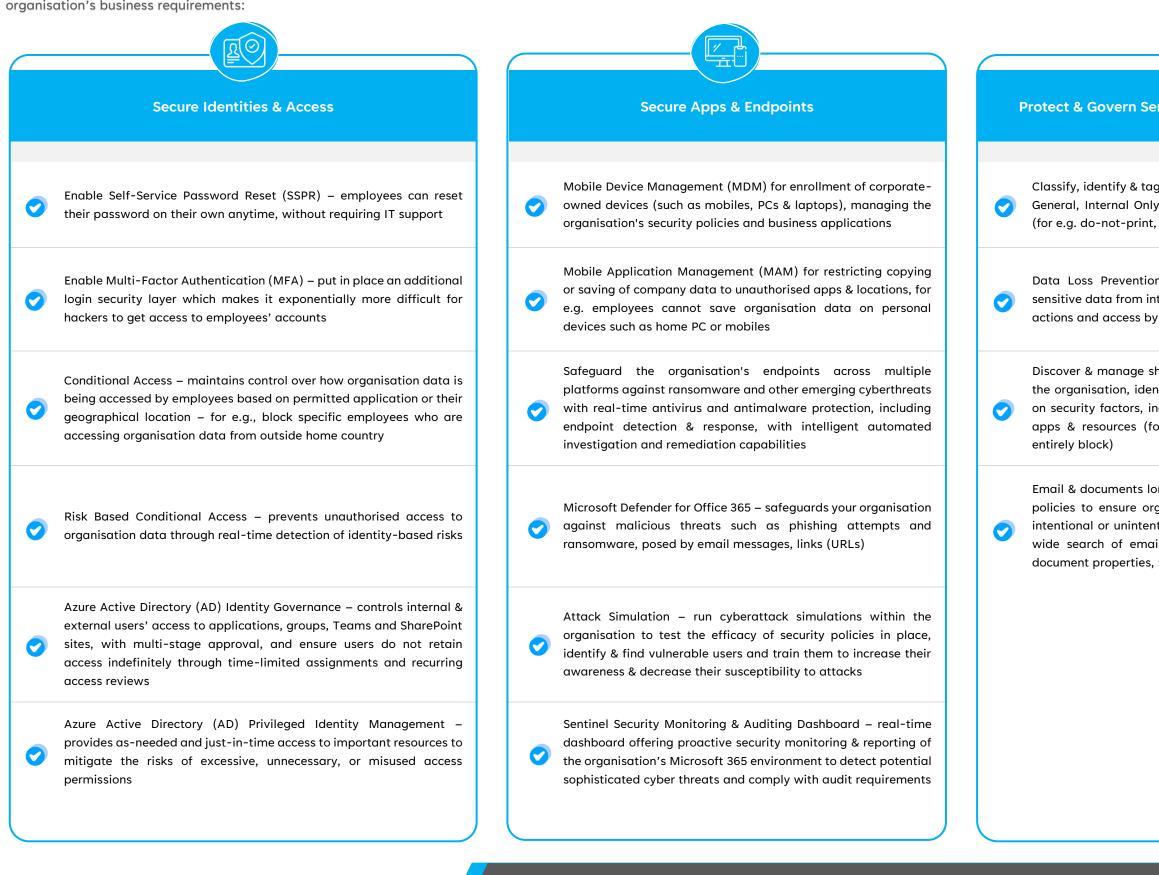

*optional

365SecurityREADY – for Enterprise Services are available in 2 options, allowing enterprise businesses to choose the right level of service as per their requirements and budget

еф	Once-Off (fixed onetime price)	₩ ₩	Managed Services (fixed per user, per month price)

365SecurityREADY

365SecurityREADY scope for enterprise businesses includes deployment of following Microsoft 365 Security features across 3 key pillars in a phased approach or deployment of each pillar as a standalone project, based upon the organisation's business requirements:

Contact Us

Protect & Govern Sensitive Data Across Documents & Emails

Classify, identify & tag email and documents with sensitivity labels (such as General, Internal Only or Sensitive, etc.) to apply data protection policies (for e.g. do-not-print, do-not-forward, for internal sharing only, etc.)

Data Loss Prevention on emails & documents – protects organisation sensitive data from intentional or unintentional leakage, blocking undesired actions and access by untrusted and/or malicious actors

Discover & manage shadow IT - discover all cloud apps being used within the organisation, identify risks associated with the discovered apps based on security factors, industry & legal regulations, and govern access to the apps & resources (for e.g., sanction, unsanctioned, mark for review or

Email & documents long-term retention – enable long-term data retention policies to ensure organisation never lose an email or document due to intentional or unintentional delete by anyone and allows for organisationwide search of emails, documents using specific keywords, message / document properties, sensitive data types, etc.
