EMPOWERING DIGITAL TRANSFORMATION

About Cloudficient

Digital information, the life force of any business, pulses through the heart of every organization. There is a common pattern to the movement of this data. At Cloudficient, we call this pattern the Enterprise Lifecycle. Cloudficient exists to orchestrate these transitions, supporting enterprise transformation scenarios as a business process, end to end with cloud native technology. Where is your organization in the Enterprise Lifecycle?

Global Organization

Founded in 2017, HQ presently in Switzerland with subsidiaries in: US, UK, Germany & India

100% Different

We strive to build partnerships with a unique business & technology approach

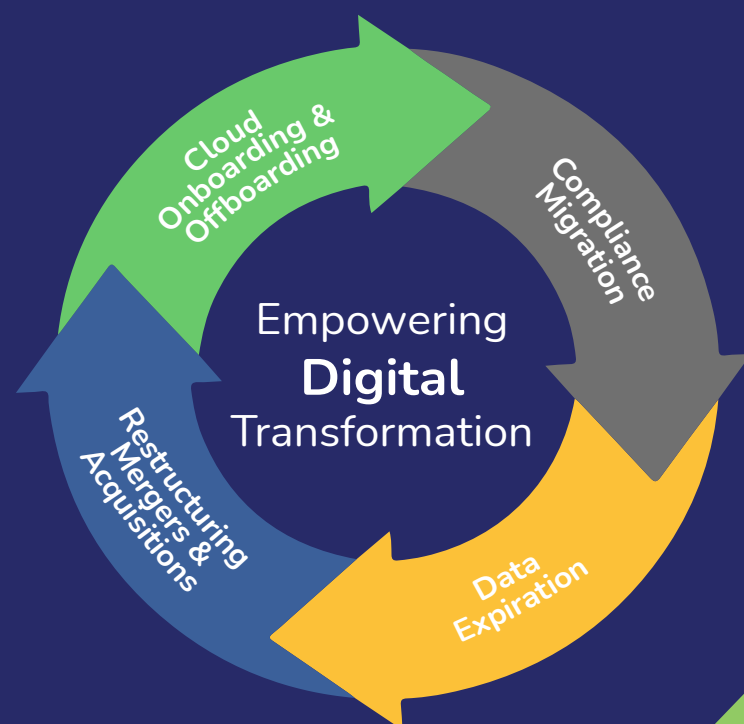

Empowering Digital Transformation

Solutions orchestrate these transitions as a business process, end to end

100% Managed Service

A time-tested delivery framework ensuring successful business outcomes

Constant process where organizations

Transition core systems to the cloud

—
Assess data value as they do

—
Repeat upon a restructuring event, like a merger or acquisition

ABOUT US

Cloudficient Technology

Built on the latest cloud native technology, the ReMAD Platform powers Cloudficient solutions to meet the needs of the largest enterprise organizations – acting as a command center for orchestrating complex transitions across multi-regional environments.

Combined with an advanced workflow orchestration engine capable of automating thousands of individual user or repository movements, the ReMAD Platform facilitates handling transformation scenarios as a business process while ensuring complete project governance.

With the ReMAD Platform foundation, Cloudficient offers a technology stack to support all common user data workloads going directly into Microsoft 365 (Suitable) as well as data sets where the cloud destination isn't as clear (Unsuitable).

Suitable vs. Unsuitable Data Types for Microsoft 365

Core Technologies

Onboard large user populations to Microsoft 365 along with legacy archive data from systems such as Enterprise Vault or SourceOne (Support available for other archives & systems).

Reduce risk and facilitate eDiscovery/Compliance by migrating PST data scattered across the enterprise into Microsoft 365, yielding a better overall experience for end-users and legal teams.

A cloud-based, Information Governance technology for managing extremely large data pools. Expireon offers Built-in Migration and Right-sized eDiscovery capabilities while ensuring full security control of the data is retained at all times.

The Power of the Cloud to get to the Cloud

The latest in enterprise transformation, Cloudficient's next generation, cloud-native technology leverages Kubernetes / Microservices resulting in tremendous scale potential.

Built-in Project Governance

With a repository of over 150+ workflow steps available to build customizable workflow templates, our technology automates various transformation scenarios ensuring each process goes through a fully audited workflow independently.

Remove ALL Project Risk

With a unique approach, Cloudficient partners with our clients to eliminate all associated project risk (ex. timelines, capabilities, end user impact, etc.) via a no cost / commitment Proof of Concept (POC).

100% Cloudficient Software & Services

All core software technologies are Cloudficient Intellectual Property with managed service packages delivered by Cloudficient's Professional Services team.
