Azure Architecture Assessment

During our 2-day workshop we realize a coherent architecture review of your Azure services. We focus on the "as-is" Azure landscape and will provide an end-to-end architecture review.

What can you expect from our Azure architecture assessment?

The Azure architecture assessment provides a strong overview of the current state of the selected applications and their cloud-readiness. This includes applications already deployed on Azure and covers their setup, deployment options, (cloud native) service selection as well as organisational, governance and compliance topics. This workshop also provides an evaluation how to migrate on-premise applications on Azure considering specific determining factors.

We provide you with clear outcome

1 proposed target architecture & roadmap for the IT landscape based on Azure

2 prioritized list of tasks & actions i.e., concept for setup of platform architecture

3 whiteboard & slides content

Based on the results of the assessment, you are able to:

- validate applications & infrastructure design decisions
- define milestones & cloud roadmap
- create an overall architecture definition & target solution architecture
- setup architecture decision records (ADR)
- implement prioritized & estimated backlog items

Structure of 2-day architecture assessment

Workshop - Day 1	Workshop - Day 2

• goals and agenda of the workshop
• discussion current IT landscape
  • deep dive current IT landscape & architecture
  • vision for future IT landscape
  • use cases / business cases to be solved
  • deep dive existing & planned software & services
  • legal & organizational limitations
	• presentation of case study & architecture review
	• evaluation of existing state-of-the-art possibilities
	• discussion of recommendation
	• revisit use cases and prioritization
	• sketch out milestones & roadmap

Let's shape the future together!
