

Server Migration to Cloud

Primary Product: Azure; **Pricing:** \$20,000.00

What is it?

Cloudica's Server Migration to Cloud service is designed to safely and effectively transfer clients' files and other digital data to a Microsoft cloud-based system. Our turnkey solution allows us to streamline the process of converting your repositories – gathered over many years and systems – and encode it in a uniform and universally integrated standard. We use the best tools available on the market today to bring you the technology of the future.

Who is this for?

Both small and medium-sized companies can benefit from these services since they allow clients to save money in the long term and ensure very high uptime of data. Additionally, files are protected by the latest security innovations.

Server Migration to Cloud

Primary Product: Azure; **Pricing:** \$20,000.00

What are the benefits of this?

- Cloud computing allows your business to remain scalable, flexible, and your data available.
- Cloud based apps are more versatile.
- Performance and efficiency increased.
- Minimal code changes required.
- Ability to handle massive volumes of data and analyze it.
- Our team can make the transition to a cloud infrastructure simple.

Outcomes of this:

- manage on-premise applications and databases,
- address issues such as high maintenance costs,
- simplify infrastructure changes,
- protect against hacking, identity theft, and data theft,
- and much more.

Steps and agenda:

- Discussing your requirements.
- An analysis of your current file-storage solution.
- A comprehensive presentation of the solutions available.
- Coverting your files to a universal standard.
- Migrating the files to a Microsoft solutions-based cloud.
- An overview of how to manage the files.
