

# Azure Arc Workshop with CloudNow

# Overview

Gain greater control with Azure Arc! Azure Arc is a hybrid management service that enables customers to manage their on-premises, multi-cloud, and edge resources as if they were native Azure resources.

This 4-day workshop is a great way to start working with hybrid resources. During the project, we will implement Azure Arc to manage your hybrid environment, and you will get hands-on experience managing your security and hybrid resources with Azure. After the workshop you can start using Azure Arc management services by yourself or you can outsource the management to us.

This workshop is designed for companies that want to implement Azure Arc hybrid management services to their environment. Participating in this workshop does not require previous knowledge of Azure Arc. Our experts are there to help.

# Project steps

**Day 1:** Scoping, planning deployment, deploying Azure subscription

**Day 2:** Deploying Azure Arc agents, configuring services

**Day 3:** Testing management solutions, Following Security and Compliance for servers found by Azure Arc

**Day 4:** Project end, Planning the road to production, Development roadmap
