# **Azure Modernization Assessment**

**CloudServus can help you transition from legacy technologies to cloud-based solutions and keep pace with the latest technology stack.**

[GET STARTED \(/CONTACT-US?HSLANG=EN\)](/CONTACT-US?HSLANG=EN)

# Eliminate roadblocks to business agility and innovation, meet the demands of a digital business, and reduce costs in the cloud.

Maintaining legacy applications is resource-intensive, expensive, and complex.

Our CloudServus Azure Modernization Assessment exposes strategic opportunities for application modernization and orchestrates a customized approach that minimizes business interruption.

Wherever your organization happens to be in its cloud journey, our services can ensure your path to transforming your legacy applications is efficient and low-risk.

## CloudServus Azure Modernization Assessment Process

Our Azure Modernization Assessment is a comprehensive analysis of your current environment - including infrastructure, data and applications.

### Infrastructure-Tier Assessment

We evaluate your infrastructure to ensure an agile, secure operational framework for scalable modernization.

For example, if your enterprise has not yet moved to the cloud then a re-hosting (Lift-and-Shift) might be recommended.

Or a re-solution to Platform-as-Service (PaaS)

### Data-Tier Assessment

Your data sources are evaluated to determine application modernization requirements. We consider factors such as the amount of servers and databases and data center storage locations. For example, we can uncover the right path to modernize SQL, and discover how to best

### Application-Tier Assessment

We analyze modernization readiness, API management, and your overall application portfolio to reimagine development tools and processes, understand legacy application environments, and prepare to optimize and reconfigure existing systems.

if you've already moved virtual machines (VMs) to the cloud.

leverage your data through solutions like Power BI.

## Our Azure Modernization Assessment is Your Outcome-Based Execution Roadmap to Accelerating Business Value

Your completed Azure Modernization Assessment delivers trusted guidance for meaningful modernization that demonstrates enhanced ROI and digital experiences.

### Deploy an actionable plan

Leverage a practical roadmap for legacy enterprise application modernization that incorporates the roles of stakeholders, technical leads, end-users, and customers for instant cloud benefits.

### Experienced recommendations

Receive application modernization recommendations from our highly experienced CloudServus team, including priorities, steps, change management, and implementation timeline.

## Robust security

Complement your Application Modernization Assessment with a separate CloudServus Cloud Security Assessment (<https://www.cloudservus.com/cloud-security-assessment/?hsLang=en>) that evaluates your Microsoft Azure environment to strengthen security and reliability for a more robust cloud ecosystem.

## Is an Azure Modernization Assessment Right for You?

Understand the costs, risks, and which type of application modernization patterns and technologies are best suited for your environment.

An Azure Modernization Assessment provides a business case for app migration (or upgrades) based on your current application portfolio and a deep understanding of your organization's legacy systems.
