

## <powerThings>

A library of pre-built components that solve common but hard problems when delivering complex Power Platform solutions...

**Simplify Adoption of the Power Platform with pre-built solution accelerators from cloudThing.**

**Extensible and flexible for local process design, without vendor lock-in.**

**Proven enterprise-grade, starter solutions. Easily customised to meet your unique requirements.**

**Customise, extend, and integrate Audit Away easily to meet requirements - without lock-in.**

**<power>Things enable organisations to benefit from proven approaches to solving common technical challenges, packaged as components which can be deployed as part of your solution atop of the Microsoft Power Platform.**

**Deploy powerThings as part of your solution with cloudThing support to significantly reduce effort, cost, and risk in delivering solutions in multiple business domains.**

## Enhance Dynamics 365

**Boost your implementation with customised implementations of power<Thing> capabilities.**

### Offload Audit Logging

Publish Audit logs outside of the CDS, on Microsoft Azure and other custom destinations outside of the CDS using <powerThing> Audit Away.

### Notify your Teams

Notify users in Dynamics, Microsoft Teams and other channels based on custom rules and system-driven events using <powerThing> Megaphone.

### Capture Data Fast

Speed-up data entry in Dynamics 365 with customisable, multi-record, keyboard friendly batch processing forms powered by <powerThing> Sonic Data Entry.

### Address your Contacts

Automatically generate formal, informal and addressee salutations for contacts to use in processing based on configurable rules using the <powerThing> Salutations engine.

## Integrate with the Common Data Service

**Perform complex data processing jobs at infinite scale on Microsoft Azure, seamlessly synchronising the results with the Common Data Service.**

### Simplify Multi-system Data Exchange

<power>Thing Data Mill provides an enterprise ready, powerful, flexible engine which can be configured to pull and push data, to and from the CDS, using multiple sources. Cleanse, transform, and synchronise huge values of data effortlessly.

### Score data, improve quality, generate insights

Enable <power>Thing Scored! to scan your CDS records, ranking them based on custom scoring rules, to identify opportunities to improve the data quality and generate insights from your data to unlock value and improve business performance.

## Compliance & Automation Tools

**Used in-house at CT to support delivery of multi-million-pound projects based on the Microsoft Power Platform, complyThings and buildThings are other additional power<Things> Available.**

### complyThings

Maintain GDPR compliance with a custom D365 app, providing support for data inventory management, privacy management, data breaches, CAPA logs and more.

### buildThings

buildThings is a set of tasks which aim to allow a full 'hands-off' deployment of Model Driven Apps on the Power Platform, including Dynamics 365 by cloning a known good master instance to a target instance. They complement the Microsoft and 3rd party ALM tools, by filling in the gaps.

## Why <power>Things

**Provides granular controls over which entities, fields and events capture audit data**

### Tried and Tested

**All power<Things> provide starter solutions based on**

### Save Time

Use them as building blocks to rapidly build bigger, custom solutions.

### Simplify Development

Do not waste time trying to solve common technical challenges,

### cloudThing Products

cloudThing are an ISO Certified, multiple accredited Microsoft Gold Partner,

<b>production proven approaches.</b>		we already have for you.	providing real solution assurance.
