

Take advantage of free components from Microsoft and cloudThing to build a modern CRM platform with no vendor lock-in

Supercharge your **fundraising** with customisable tools such as Gift Aid Management, Donation Management and more

Understand your supporters and volunteers alike with **rich data insight** tools powered by the cloud

Integrate with your existing experiences and technology investments

Award-winning technical and development support to **continuously improve** your service

We have partnered with Microsoft to help Nonprofits build a CRM system that is open to development, easy to adopt, and easy to adapt. Take advantage of pre-built components and tools to get started today.

Our Nonprofit powerup can help your organisation to make the most of technology in every department.

Pay only for implementation, customisation, and support costs

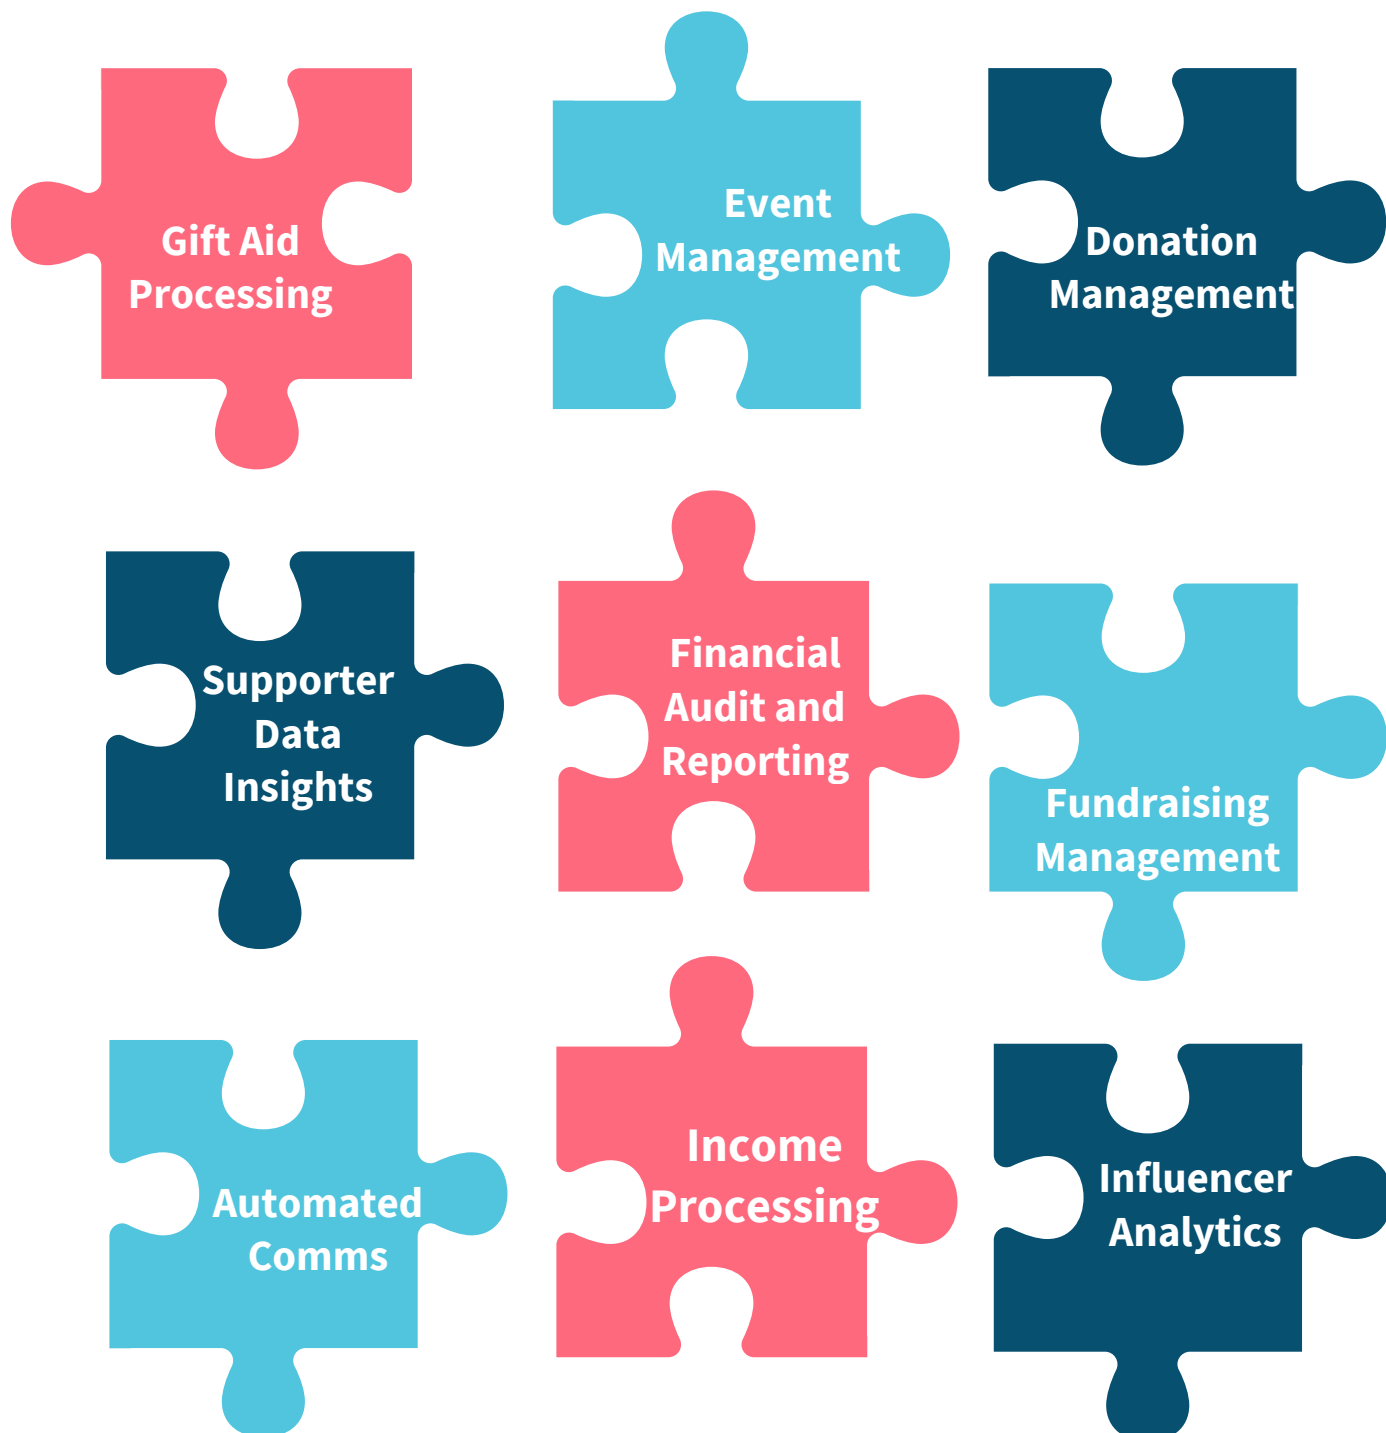

Free tools and components designed to be integrated and extended over time

No strings attached. Keep the code and the solution to build upon however you see fit

Featured Components

Both Microsoft and cloudThing have committed to continuously building and releasing components that make up the Nonprofit powerUp. The tools available today can help with the following key areas for your Nonprofit:

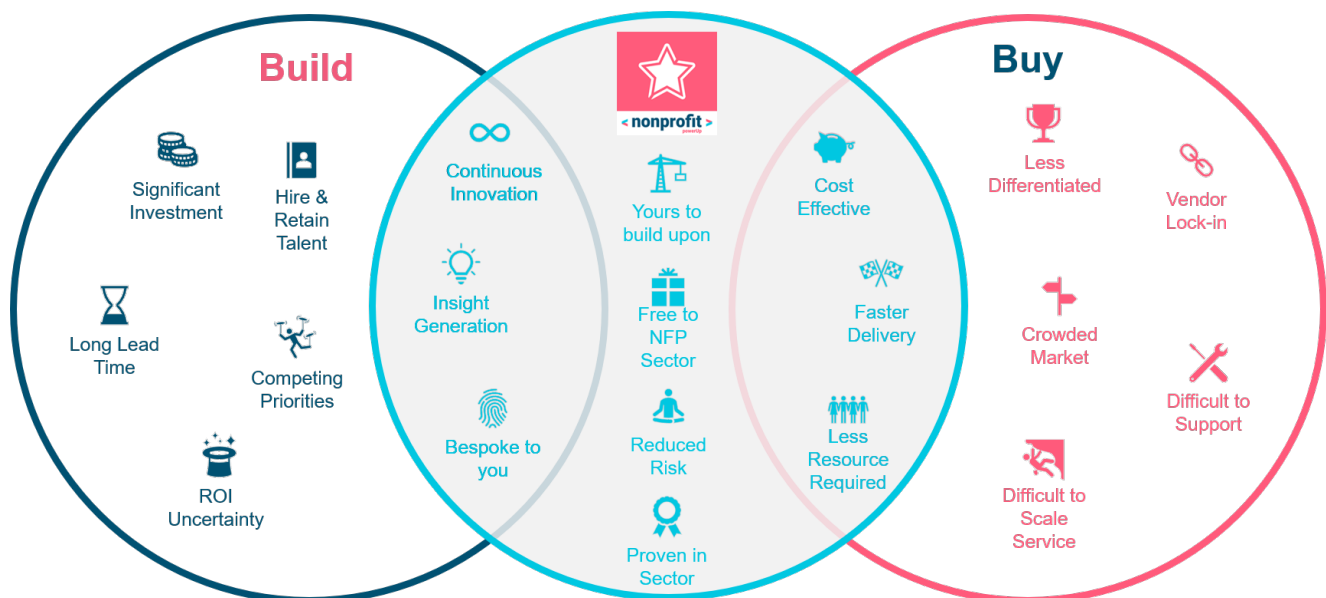

Why build your digital future with the nonprofit powerUp?

Many Nonprofits recognise that improving their technology platform is essential to long-term success. With many supporters expecting an increasingly digital experience, relying on old systems and processes can only last for so long.

We understand that buying the right solution can be a daunting and difficult task, with making the right decision crucial for the organisation to see a return on investment.

Some organisations decide the simplicity of buying a complete ‘off the shelf’ solution is the right choice, but this can mean a making do with a product that isn’t quite right, or paying expensive customisation fees and being ‘locked in’ to a product that is difficult to maintain yourself. On the other hand, organisations that invest in building something totally bespoke may end up with a better solution in the long run, but this can take years to see ROI, and may be obsolete before it is even available to users.

With the Microsoft Power Platform, Nonprofits can build unique experiences on a secure, established ecosystem that is familiar to users and staff alike. cloudThing are able to offer additional value to Power Platform users with free components and tools that are customised for Nonprofits.

Options for all budgets

There are options available to suit any budget or requirement. We only charge for implementation and customisation, with a variety of support options. Large charities may need 24/7 support with bespoke requirements and customisation, while modest budgets are able to use the components out the box with minimal training costs.

You are able to combine or extend any of our package offerings to meet your specific requirements. We are happy to demo this and answer any questions you have to meet your expectations.
