

# Cloud OptimizeX Accelerator

Apps - Data - Cloud Platform

Targeted optimization services that help organizations reduce cloud waste, improve workload performance, and establish efficient, well-governed cloud operations.

## Optimization snapshot

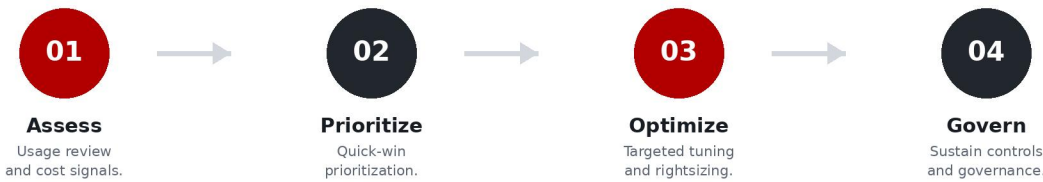

## The problem

As cloud environments grow, unused resources, overprovisioned services and legacy configurations quietly increase cost and reduce performance. OptimizeX gives teams a clear, practical way to identify what is leaking value and fix it without disrupting operations.

## Engagement scope

- **Cost and usage assessment**  
Identify spend patterns, idle resources and hidden cost drivers.
- **Performance analysis**  
Review workload behavior across apps, databases and infrastructure.
- **Resource rightsizing**  
Adjust capacity and configuration to match real demand.
- **Governance improvements**  
Improve visibility, standards, ownership and cost control routines.

## How the accelerator works

## What customers gain

✓ **Lower cloud costs**  
Reduce unnecessary spend from idle, oversized or poorly configured resources.

✓ **Improved workload performance**  
Tune critical apps, databases and platform resources for better responsiveness.

✓ **Better cost visibility**  
Expose cost drivers, ownership gaps and recurring optimization opportunities.

✓ **More efficient operations**  
Create governance habits that keep cloud usage aligned to business demand.

## Ideal fit

Organizations running growing cloud estates that need clearer cost control, stronger performance, and practical governance across applications, data and platform resources.

## Next step

Start with a focused optimization assessment and leave with implemented improvements, a prioritized roadmap, and a clearer operating model.
