

Secure AI Adoption Readiness Program

Deploy AI with confidence, security and measurable business impact.

Cloudware helps organizations prepare the data, security, identity, endpoint, governance and user adoption foundations required for successful AI productivity deployment.

What this engagement delivers

AI readiness assessment

Review Microsoft 365, identity, endpoint, data, collaboration and security readiness.

Security & governance review

Assess permissions, data exposure, compliance controls and responsible AI requirements.

Persona & workflow mapping

Identify departments, user groups and workflows where AI can deliver practical value.

Adoption enablement plan

Define onboarding waves, communication themes, champions, training and success measures.

Executive rollout roadmap

Prioritize gaps, quick wins, risk actions, KPIs and next-step implementation options.

Business outcomes

- Lower risk before broad AI rollout
- Higher adoption through role-based enablement
- Practical roadmap for secure AI scale
- Clearer data, identity and access readiness
- Measurable productivity and value indicators

Engagement path

Priority workloads

- Microsoft 365 Copilot
- Microsoft Entra ID
- Microsoft Purview
- Microsoft Intune
- Teams & SharePoint
- Copilot Studio
- Power Platform

Best fit

For organizations preparing for first AI productivity deployment, evaluating Copilot adoption, or scaling AI across departments while maintaining governance, security and compliance.
