

Secure Azure VMs, Apps & Networks using XG-Protect on Azure

Cloudware Africa LIMITED

Cloudware delivers an exceptional security platform that protects organizations assets extended to the public cloud.

As envisioned by Cloudware security experts, our security solution is a core intelligent platform that tightly integrate with Azure sentinel to provide exceptional intelligence & protection which together synchronize network and against today's most advanced threats to protect Azure cloud environment

WHAT WE OFFER

The solution avails extensive on-box reporting (Pluggable into cloud SIEM), with full insights into endpoints and network activities, surfaced using easy-to-understand indicators to take preventive measures before problems occur.

The solution is available as a preconfigured virtual machine within the Azure Marketplace. Azure Resource Manager templates can be used to speed deploy or customize configuration to meet the specific needs of customer's environment.

XG-Protect offers next-generation protection for Azure-deployed VMs. It provides a comprehensive set of protection with synchronized security capabilities and automatic threat response which instantly identifies, and isolates compromised systems to stop threats from spreading.

XG-Protect leverages Azure native networking fabric to avail seamless communication channel and effective protection capabilities for business-critical information and applications on servers hosted on Azure VMs.

WHAT OUR CUSTOMERS ARE SAYING

"I have used the Sophos XG on Azure firewall for about a year now and i must say the experience has been wonderful. There was need for a security solution on our infrastructure on Azure and Sophos XG was implemented to work side by side with Azure network security to provide protection against threats, block unauthorized access amongst other things. The integration into the existing Azure network and On-premise network was seamless.

– Stephen Tsetsekple
IT Manager GWCL.
