INDIVIDUAL PACKAGE ORDERS

Our customized software packages are always charged at a fixed price, regardless of their complexity. This gives you full cost control at all times and prevents unpleasant surprises.

New customers can test our services by making a small down payment and transferring the remaining amount after checking the software package they have received. This allows you to test our services risk-free.

YOUR SOFTWARE PACKAGED BY OUR PROFESSIONALS

The Cluebiz Engineers have years of experience in the packaging of software packages. Thanks to the creation of well over 10,000 packages, they have the wealth of experience to prepare even complex software installations for you.

All our employees are proficient in both MSIX and App-V packaging.

Test our know-how with your first package order!

HOW DOES CLUEBIZ CREATE COMPLEX PACKAGES?

The good news: Cluebiz masters complexity. This is because Cluebiz Package Library makes customized configurations possible. The packages automatically adapt to your guidelines, individual settings and existing IT infrastructure.

Large companies in particular often use multiple infrastructures such as Citrix, InTune or Airwatch. To get the right packages, simply create different profiles and get the variants you need.

WHAT ABOUT PARAMETERS AND LICENSE KEYS?

You define settings such as license keys, certificates, start page and many others for each package. If you use Microsoft's System Center Configuration Manager (SCCM), Cluebiz automatically generates the MECM integration script. This integrates the package at the touch of a button - including Dedection Rules and product logo. The same also applies to LanDesk, Baramundi, Matrix42, CA, Columbus and Avanti.
