

Microsoft Security Assessment - Azure & Office 365

Security Assessment: What is it?

This Microsoft Solution Assessment for Azure & Office 365 shows a summary of your security posture based on system configurations, user behaviour, and other security-related measurements for Azure and Office 365. It is not an absolute measurement of how likely your system or data will be breached. Rather, it represents the extent to which you have adopted security controls in your Microsoft environment that can help offset the risk of being breached.

This **FREE** of charge assessment (RRP £1,499) will involve;

- Assessing your current Microsoft 365 Security Posture
- Assessing your current Microsoft Azure Security Posture (if applicable)
- A report detailing recommendations and improvements to be made to increase your overall security posture in both Microsoft 365 and Azure

WHY CHOOSE CODESTONE?

- Single, strategic IT partner
- Bolstered by industry-leading names
- Microsoft Gold partners
- 240+ staff, £32M turnover
