

Generate confidence, not just code.

AI-powered software development with robust code integrity.

At Qodo, we take a quality-focused approach to code generation with the first AI-powered code integrity platform. **Qodo Gen** and **Qodo Merge** are comprehensive tools for code writing, testing, and reviewing, underpinned by capabilities built to ensure quality code across the development pipeline.

90% Of developers completed all tasks with **25%** Time savings and **5** Bugs per dev caught every month

Qodo's unique approach

We've designed a comprehensive integrity system for generative coding that enables AI-powered software development at scale.

- Contextually-aware analysis and generation**
Local code indexing and advanced RAG for retrieving context from enterprise-scale code repos
- Test-driven flow engineering**
Based on the Generative Adversarial Network framework that iteratively generates code, and runs and fixes it against input-output tests
- Comprehensive testing and review**
Advanced techniques that optimize test automation and enable execution of clean and healthy code
- Multi-Agent**
Specialized agents for specific tasks across the development pipeline, including dedicated prompting flows and fine-tuned models

Already use Qodo: **1M+** Developers | **750+** Companies
