Power BI Healthcheck

Putting the Power in Power BI

01/03/2023 V1

Why is a Power BI Healthcheck useful?

Power BI is a scalable, self-service business intelligence tool designed to help organisations' get real insight into their business data, where users can quickly create reports and dashboards to empower collaboration and decision making on a daily basis.
But what happens when Power BI is out of control? Or it is not performing how your users expect it to? This can be a real challenge when the platform becomes more of a hinderance than help on a daily basis.

Coeo's Power BI Healthcheck is here to provide the guidance you need to change how Power BI works for your organisation.
Primary challenges

Deployment sprawl across business

Duplication between reports and data sets

Low trust in the platform

Significant performance issues

Lack of in-house skills or time

Ideal solution

Secure Power BI tenant with clear access controls and data lineage

High performing platform with optimised data modelling

Scalable solution to empower users to make better business decisions

Desired outcomes

Valued business intelligence tool

Improved data trust and data culture

Reduced time managing performance issues

Improved TCO

Taking back control of Power BI

Assess and review the performance and security of your Power BI environment to improve scalability, governance and trust in your business intelligence platform with Coeo's Power BI Healthcheck.

Architecture Review

Benchmark your Power BI environment against best-practice performance, security, access and data integration industry standards.

Cost Optimisation

Review licensing strategy, total cost of ownership and opportunities to consolidate business intelligence tools.

Operational Excellence

Kickstart your Power BI Center of Excellence focused on Power BI governance, operational excellence and improved data culture.

Coeo

Coeo, Microsoft, and the Power BI Healthcheck

Coeo are an advanced specialist Microsoft Data & AI partner, providing consultancy and 24/7 dedicated support.

Coeo can support your organisation to evaluate the current state or your Power BI environment with expert advice and guidance aligned to the Well-Architected Framework approach for technology optimisation, management and governance.

Assess your Power BI environment

Discovery assessment, covering current deployed architecture, security controls, user role and access, dataset usage and license spend.

Detailed report and recommendations

Prioritised recommendations to improve cost, security, performance and operational excellence including remediation advice and next steps.

Make a plan with expert consultants

Working together to share knowledge, experience, and best practice remediation advice to make Power BI work harder for your business.

Customer success: Underwriting company reduces compliance risk

A global underwriting company, dedicated to well-structured reinsurance risk management solutions partnered with Coeo to understand how their Power BI environment was exposing data vulnerabilities across their organisation.

A company which prides itself on expert knowledge and efficiency found the internal sprawl of datasets and Power BI reports were affecting platform performance and user experience.

▶ Evaluating current state

An extensive number of datasets in the semantic layer led to report sprawl in the 1000s; evaluating inefficiencies provided a clear understanding of the challenge at hand.

▶ Prioritising security and governance

A high, medium and low rag-status report of security and governance risks provided clear focus to improve the management of Power BI across the organisation.

▶ Roadmap to remediation

Working collaboratively to understand the internal capability and document remediation action provided a clear roadmap to an improved and well managed Power BI environment.

Make the most of Power BI with Coeo
