

Cofinity-X

Dataspace OS

Value Proposition

Dataspace Operating Suite (DOS)

For every Supply-Chain-Partner, that wants to profit from the first open and collaborative Dataspace for the Automotive Industry.

Who intends to boost business processes using data driven value chains and want to leverage their data silos to a sovereign and standardized data eco-system.

Cofinity-X Dataspace Operating Suite (DOS) is a Software-as-a-Service Cloud-Platform that enables you to connect via the EDC-Connector to the Catena-X Dataspace and manage your assets.

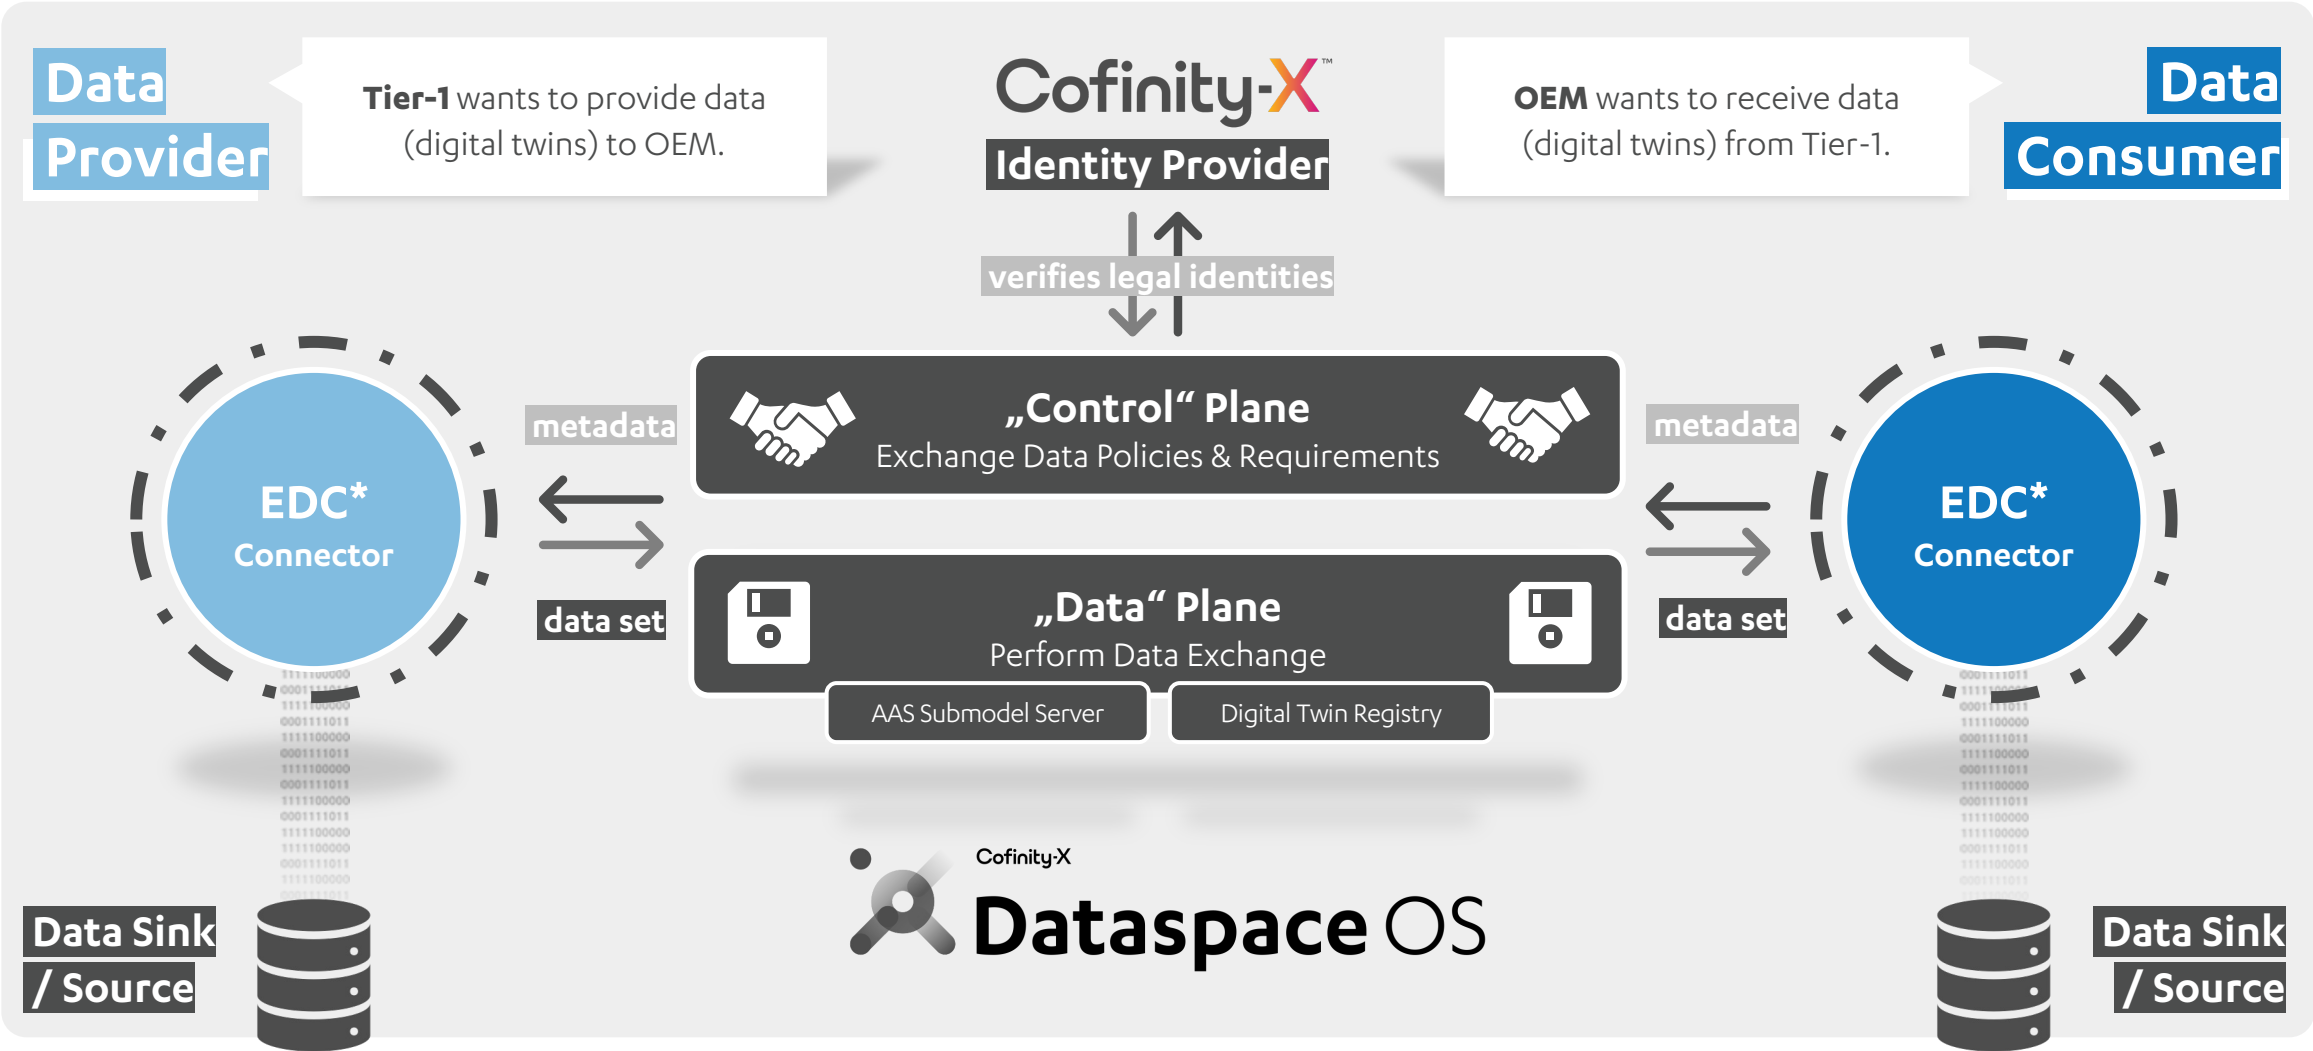

Dataspace OS provides a set of tools to easily develop and manage all relevant Enablement Services, especially the Eclipse Data Space Components (EDC) and the DTR and AAS.

*DTR = Digital Twin Registry

*AAS = Asset Administration Shell

1 Description — 2 Submodel — 3 Asset — 4 Contract — 5 Publish

i With this wizard you can share your data sets with EDC connectors step by step.

To share data from your EDC:

- Create or select existing submodel.
- Create asset connected to this submodel.
- Create contract which will have defined policy and assigned asset. You can use an existing policy or create new one.
- Publish your asset in the Digital Twin Registry. This step is optional.

Create or select submodel

Create asset

Prepare contract
