

Cognizant[®]

Modern Workplace Foundry

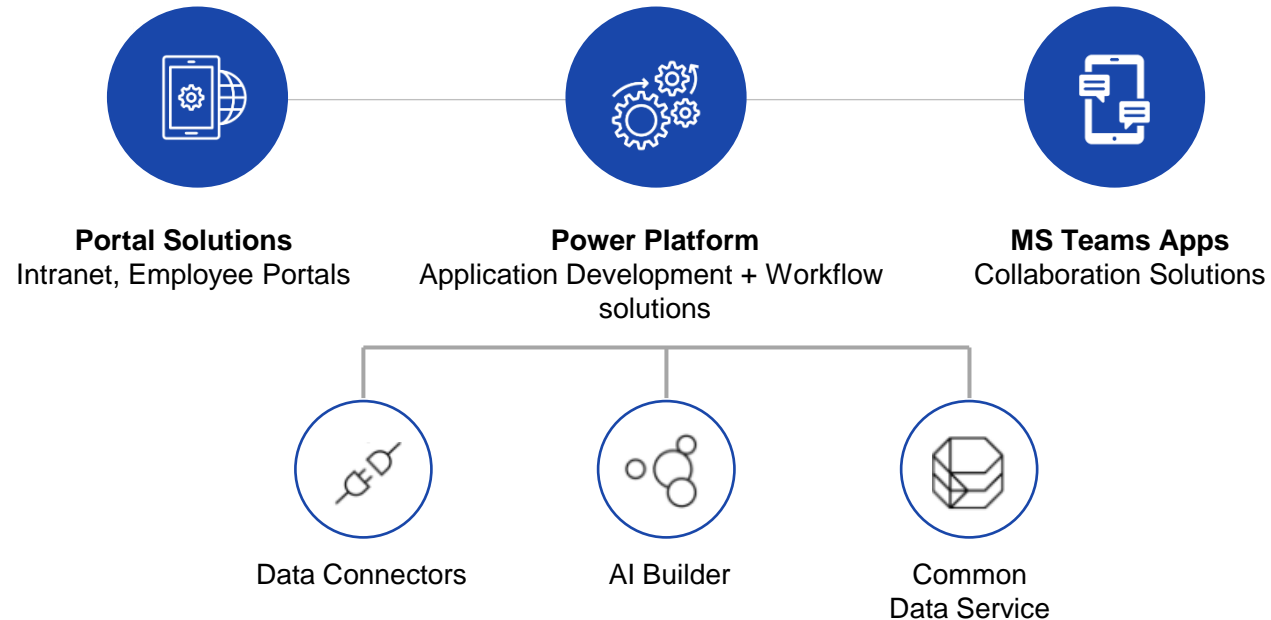

Modern Workplace Foundry

Modern Workplace Foundry at Cognizant reimagines development of M365 solutions to deliver industry standard applications in a low cost and highly maintainable model. Cognizant leverages the frameworks, libraries, best practices developed through the competency to fuel the delivery of micro / mini to large application development.

Scope of Services

MICROSOFT 365

The custom and low-code platform that spans across Microsoft 365, Azure and standalone applications

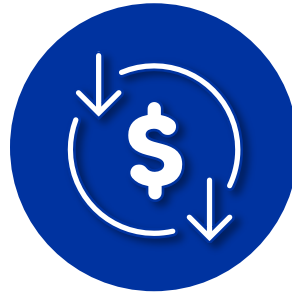

Why Foundry?

Agile in Nature

In terms of project execution / scaling resources up or down. That helps us respond faster to new opportunities whenever they arise.

Reduced Cost

Reduced delivery times, development, and maintenance costs by increasing efficiencies and leveraging reusable assets. We will be able to cut the costs by up to 80%.

Outcome Based Model

Defined & agreed scope of work. Clear milestones to achieve and incremental product built over period of time. Perfectly suits for POCs, business applications addressing immediate needs.

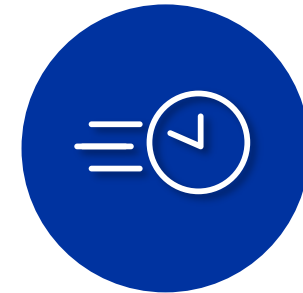

Innovation

We also strive to manage our operational costs efficiently. As a lean team, we constantly look to innovate in processes and technology to meet the goals and increase ROI.

Knowledge & Skill

Foundry utilizes trained / certified architects & developers. Better strategies for prevention and resilience to incidents because the processes and procedures are modified according to the discovery of new knowledge

Faster Time to Market

*Streamlined processes decreases the time to execute tasks and achieve objectives, which translates not only into improved times but also in overall quality
Typical timeline : 4 to 6 weeks

Cognizant's MWP Foundry Offerings

STRATEGIC SERVICES

Platform Enablement and Adoption

- Power Platform administration and governance
- Roadmap guidance
- Capacity planning
- License and cost optimization
- Security Compliance
- Application lifecycle management

SOLUTION DEVELOPMENT

Design and Build Next Generation Employee Experience

- Application Architecture Review
- Application Design Review
- Thought Leadership
- Brainstorming across Technology stack
- App Development and Roll-Out

BESPOKE SOLUTIONS

Custom development and Industry specific custom services

- MS Teams apps created and delivered for specific use cases
- PowerApps / Power Automate Examples with use case library
- PoC and Demos
- Rapid development
- Agile factory
- Integrated solutions using PowerApps and Data Gateway

SOLUTION SUPPORT

Technology and solution support with business enablement in mind

- QuickHelp Power Platform Skill Path
- Customer introduction to PowerApps training
- 24*7 baseline support
- Custom Application support
- Microsoft follow-ups

Foundry vs Flex Up

Foundry

- **Time and Cost Effective** – Foundry model allows you to get a team of skilled and experienced resources who have all the necessary skills / tech tools to work on your project. With this, you save time, costs, and efforts, as you get everything you need.
- **Fixed Costs** – There will be a fixed price for the services and will vary based on amount of work to be performed.
- **Easy to scale** – to meet short-term spikes in demand. Foundry will manage the resources / skill set required for successful delivery
- **Project Kick-Off Lead Time** – With foundry model, we would be able to kick-off the project within 2 weeks of approval
- **Knowledge Retention** – Knowledge is vested within the team, will be documented and easily transferrable
- **Resource Management** – Foundry will be responsible for staffing and for utilization and management of resources.

Flex Up

- **Can be Expensive** – If used inappropriately, staff augmentation may cost you more in the long term, as the team is being carried in case of any short gaps between projects
- **Time & Material** – typically billed on a time-and-materials pricing model, which means you might end up taking on unnecessary costs long-term
- **Can be difficult to scale** – In case of a change to the scope of the project, it might be more complicated to find or change resources when using this model
- **Project Kick-Off Lead Time** – Resource availability and onboarding may take 4 – 6 weeks from the time of approval
- **Knowledge Retention** – Knowledge vested in the individual working on the specific project. There is a risk of developing dependencies on a single resource.
- **Resource Management** – Increased overhead for client to manage individual resources, making sure of task assignment and utilization
