

The Foundry reimagines development of solutions to deliver industry standard applications in a low cost and highly maintainable model. Cognizant leverages the frameworks, libraries, best practices developed through the competency to fuel the delivery of micro/mini to large applications.

Microsoft 365 & Azure

The low-code platform that spans Microsoft 365, Azure, Power Apps Portal and standalone applications

Quick Time to Market

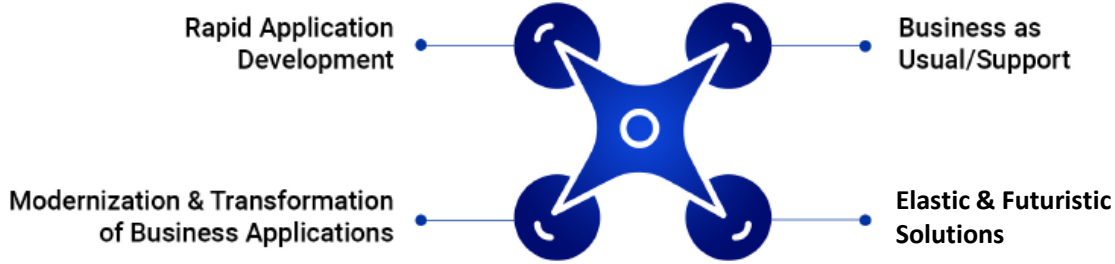

Reduced Cost for App Development

Highly Scalable

SERVICE OFFERINGS

FIXED COST ENTERPRISE STANDARDS

MICROSOFT 365 GOVERNANCE & STANDARDIZATION

WHAT IT SOLVES

- How do we enable proper governance to guarantee security, transparency, quality and consistency of results?
- How do we assess risks and rationalize our existing app landscape?
- How do we empower Citizen Developers to innovate without app sprawl?
- How do we plan and manage the migration of our legacy apps?

WHAT IT DELIVERS

- Reduced time and effort for users to consume their data and build their applications.
- Improved time to market through reusable assets. Uniform user experience and robust delivery through best practices and enforced standards
- Enable access to business data through Power Platform connectors and integrations with legacy applications through custom connectors.
- Provide end-to-end support for identification, business case creation, prioritization, design, development, testing, acceptance, and distribution of assets and apps
- Provide a flexible set of tools and services on top of the intelligent core with iterative sprints scheduled to work against the app backlog

WHAT IT INCLUDES
