

Cognizant Data & Intelligence Tool Kit (CDIT) - BI MIGRATION FACTORY

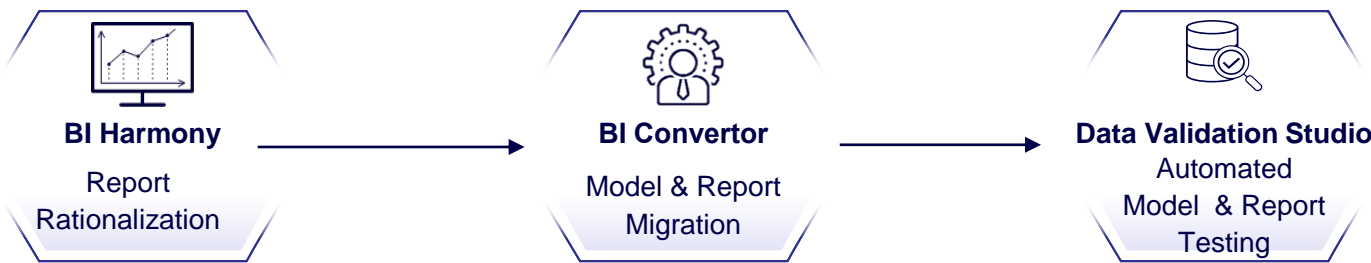

Challenges with Legacy BI

Many organizations struggle with a huge inventory of legacy BI reports, often plagued by inconsistent definitions and complex data models. These issues not only complicate report development but also impact Service Level Agreements (SLAs), leading to delays and inefficiencies. Furthermore, the absence of an end-to-end automated migration solution in the market and the custom architecture underpinning each BI tool add to the complexity of managing BI environments.

CDIT BI Migration Factory offers a comprehensive solution to address these challenges

BI Migration Factory is a package of CDIT tools that makes your BI journey seamless starting from Assessment & Rationalization, migration to validation .

- **BI Harmony** helps to extract Meta data from various BI tools and automates report rationalization process.
- **BI Converter** automates the migration of Model and report metadata from any of the supported BI platform to the Modern BI Platform.
- **Data Validation Studio** automates the validation of migrated reports.

Benefits

-  Faster Time to Market thru Automation
-  40 to 60% reduction in rationalization effort
-  Up to 50% savings in end-to-end migration process
-  Reduced Total Cost of implementation

Supported Patterns
