Microsoft 365 Copilot
Organizational Deployment

Transform how you work

Following Envisioning and Pilot, Organizational Deployment and Enablement is designed to identify the remaining personas that will receive Copilot licenses, to identify security gaps requiring remediation* and to develop and execute a phased deployment to roll out Copilot for all in scope business users. Changes to workplace tooling are best enabled by strong adoption and change management practices, end-user communications and training.

Deploy Microsoft 365 Copilot and transform how you work

- Extended security readiness assessment
- Identification of additional key personas and processes
- Copilot deployment in waves
- End user communications, training and basic adoption and change management

* Optional services available:

- Advanced adoption and change management available
- Advanced security and compliance remediation available
