

# Organizational Deployment

## Transform how you work

Following Envisioning and Pilot, Organizational Deployment and Enablement is designed to identify the remaining personas that will receive Copilot licenses, to identify security gaps requiring remediation\* and to develop and execute a phased deployment to roll out Copilot for all in scope business users. Changes to workplace tooling are best enabled by strong adoption and change management practices, end-user communications and training.

## Deploy Copilot for Microsoft 365 and transform how you work

- Extended security readiness assessment
  - Identification of additional key personas and processes
