Power BI to Fabric Modernization

Power BI to Fabric Modernization service is designed to help organizations future-proof their data analytics infrastructure by migrating from Power BI Datamarts, Power Query and Dataflows to Microsoft Fabric.

This service ensures compatibility with future Microsoft updates, enhanced performance, and cost-effectiveness, leveraging new AI features like Copilot and Open AI.

Envision your **Fabric Success Story** with Cognizant, with the deep technical knowledge of world class Microsoft consultants combined with unique IP & Accelerators.
Outcomes & Deliverables include:

- **Assessment Phase:** Evaluate current Datamarts and Dataflows to understand the scope of migration.

- **Planning Phase:** Develop a detailed migration plan, including timelines, resource allocation, and risk assessment.

- **Preparation Phase:** Set up the Microsoft Fabric environment and prepare data for migration.

- **Migration Phase:** Execute the migration using automated tools and manual adjustments as needed.

- **Validation Phase:** Thoroughly test the migrated dataflows to ensure they meet performance and reliability standards.

- **Optimization Phase:** Fine-tune the new setup for cost-effectiveness and enhanced performance

- **Training and Support:** Provide training for end-users and ensure robust support mechanisms are in place.
