

WHAT IS COLLATE?

Collate delivers an AI-powered platform for data discovery, observability, and governance that empowers data teams to build and manage high-quality data assets. Trusted globally by Fortune 500 enterprises and innovative startups, Collate is built on the fast growing open source

OpenMetadata project, which has 2,000+ enterprise deployments and 1 million+ Docker downloads. Based on open metadata standards and APIs, with connectors for a wide range of data services, OpenMetadata enables end-to-end metadata management and transforms the ways data teams work.

Companies have made huge investments in their data systems, but they still struggle to unlock value from their data. Teams are bogged down by manual tasks, spiraling costs, and unreliable data.

The reason is that the tooling is broken. These are siloed, manual point solutions that fail to manage the full end-to-end workflows around data. Teams are separated by different tools, key context is lost, and processes fail to scale.

Collate's agentic platform empowers every data practitioner to find the right data, ensure its quality, and maintain proper governance. Data platform engineers, governance teams, analysts, scientists, and leaders can now all share the same source of truth. Increase productivity, lower costs, and reduce time to market with an AI-powered solution designed to transform your data culture.

DATA DISCOVERY: EMPOWER TEAMS TO FIND KEY DATA ASSETS

Get the right data to the right people to do their work. Collate delivers a single source of truth for all your data sources, data pipelines, and data products.

DATA OBSERVABILITY: SEE CHANGES TO YOUR DATA SOONER

Be the first to know about data schema changes, volume fluctuation, data distribution, pipeline issues, and test failures in order to proactively get ahead of the problem.

DATA QUALITY: TRUSTED AND RELIABLE DATA FOR THE BUSINESS

Proactively manage the data quality of your most business-critical data assets and ensure they receive priority operations and infrastructure.

DATA GOVERNANCE: COLLECTIVELY MANAGE RISK AND COMPLIANCE

Gain visibility and control across your entire data estate with a centralized metadata platform for managing data governance, compliance, security, and privacy.

DATA LINEAGE: KNOW WHERE YOUR DATA COMES FROM AND GOES

Column-level lineage maps help you understand your overall data flow. Tier critical and sensitive data to manage its quality, observability and governance.

DATA COLLABORATION: TRANSFORM YOUR DATA CULTURE AND TEAMS

Shared workspaces and workflows foster shared responsibilities and ownership among data producers and consumers across your organization.

DATA INSIGHTS: IMPROVE DATA HEALTH AND TEAM PERFORMANCE

Monitor and transform how your teams use data, with technical and business KPIs. Connect easily with open APIs and vendor-agnostic connectors to all your data services.

COLLATE AI: ACCELERATE DATA TEAM PRODUCTIVITY

Empower data teams with orchestrated AI agents and intelligent automation designed to accelerate workflows, manage data health, and deepen understanding of your data.
