Visit our Experience center

Our workspaces in Almere are fully furnished according to our 365 Hybrid view model. An ultimate Teams Experience center for hybrid meetings. At Communicativ you will not see a showroom with only all types of hardware technology, but really fully operational meeting-, collaboration-, focus-, training-, learning- & event spaces. Do you want to experience live all the possibilities for your organization with Microsoft Teams for hybrid meetings?

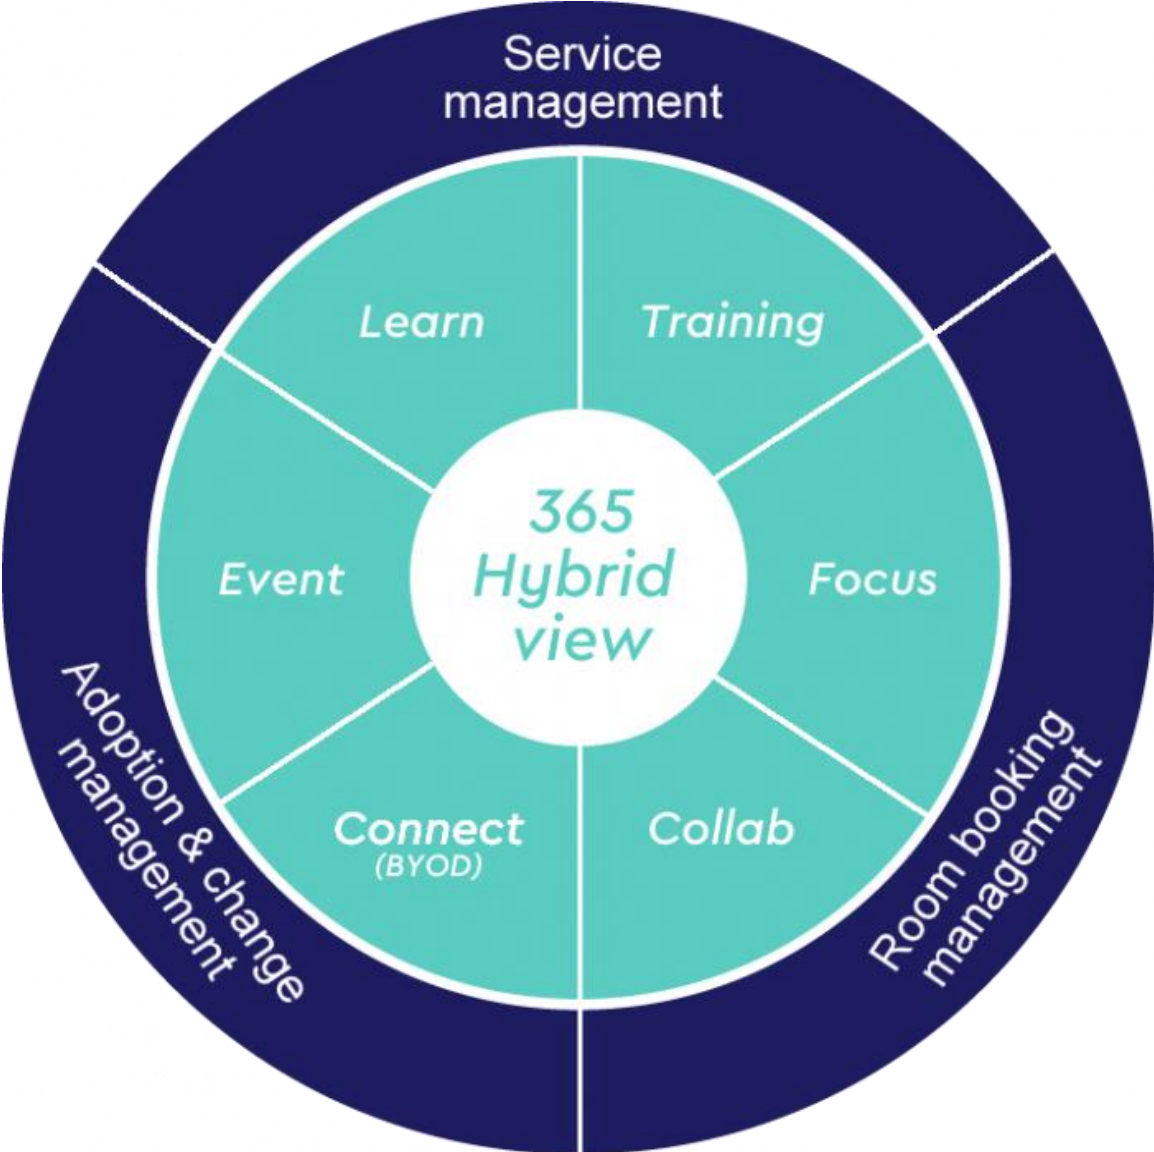

Functionalities

- Easy to schedule via Microsoft Outlook
- Data within your own IT-environment
- Ability to actively collaborate and screen sharing
- Optimal visualization and sound
- Simple working method and ease of use

Advantages of Teams Meeting Room devices

- Collaborate anytime, anywhere
- Optimized for Teams use
- Remote meeting
- Extra break-out sessions
- Whiteboard options
- 1 user-friendly interface

Hybrid Meeting Strategy

Event Space

Do you want to address your employees or shareholders on a monthly basis? Or organize (hybrid) events? The event space is ideal for this. The event space can often be set up in the canteen, theatre or auditorium, where the space serves a double function where possible. This works extremely efficiently and prevents the costs of periodic hiring of external AV equipment. The investment in an event space is usually recouped in 3 events.

Teams Meetings makes teamwork easy

Communicativ is a Microsoft Partner for implementing, integrating, and deploying Microsoft collaboration solutions. The aim is to make teamwork more efficient. Give collaboration a new boost and start with Microsoft Teams meeting room solutions.

When using Microsoft Teams in the workplace, it is strongly recommended to future-proof the meeting rooms or workspaces and optimize them for the use of Microsoft Teams. This makes it possible to support a so-called hybrid meeting: part of the participants are in the meeting room (on-site participants) and part of the participants are remote. (online participants)

Training

Communicativ has developed a Training space based on Microsoft Teams specifically for the advanced training environments and trainers. This is an optimally interactive program in which the trainer remains in control of all factors such as camera image, content and the experience of the students' non-verbal communication. This room is optimized on sound and light to transfer the optimum experience.

Focus

The Focus-space is a (meeting) environment that provides optimal support in carrying out work processes in which focus is important, and making optimal use of any communication means to personally participate in online meetings. For example: 1-on-1 online meetings, HR-video intake conversations, or the traditional call booth to make business calls in private.

Collab(oration)

Optimal collaboration and space for creativity are central to the Collaboration Space. Here we immediately think of a Surface Hub, Neat Board or some kind of interactive set-up to support these work processes. Collaborating on documents, using a digital whiteboard, access to various scrum boards, and 3D drawing applications make this space interactive for all participants.

Connect

The classic meeting room where communication with colleagues, customers, suppliers and other company contacts are central. Via Microsoft Teams, people can participate in meetings and content can be shared via a personal device.

In addition to their daily Teams meetings, many organizations and employees also have to deal with meetings from 3rd party platforms, including Zoom, Google meet, Webex, and other communication systems. The Connect space can be expanded with the BYOD/BYOM (Bring your own Device – Bring your own Meeting) setup.

Learn

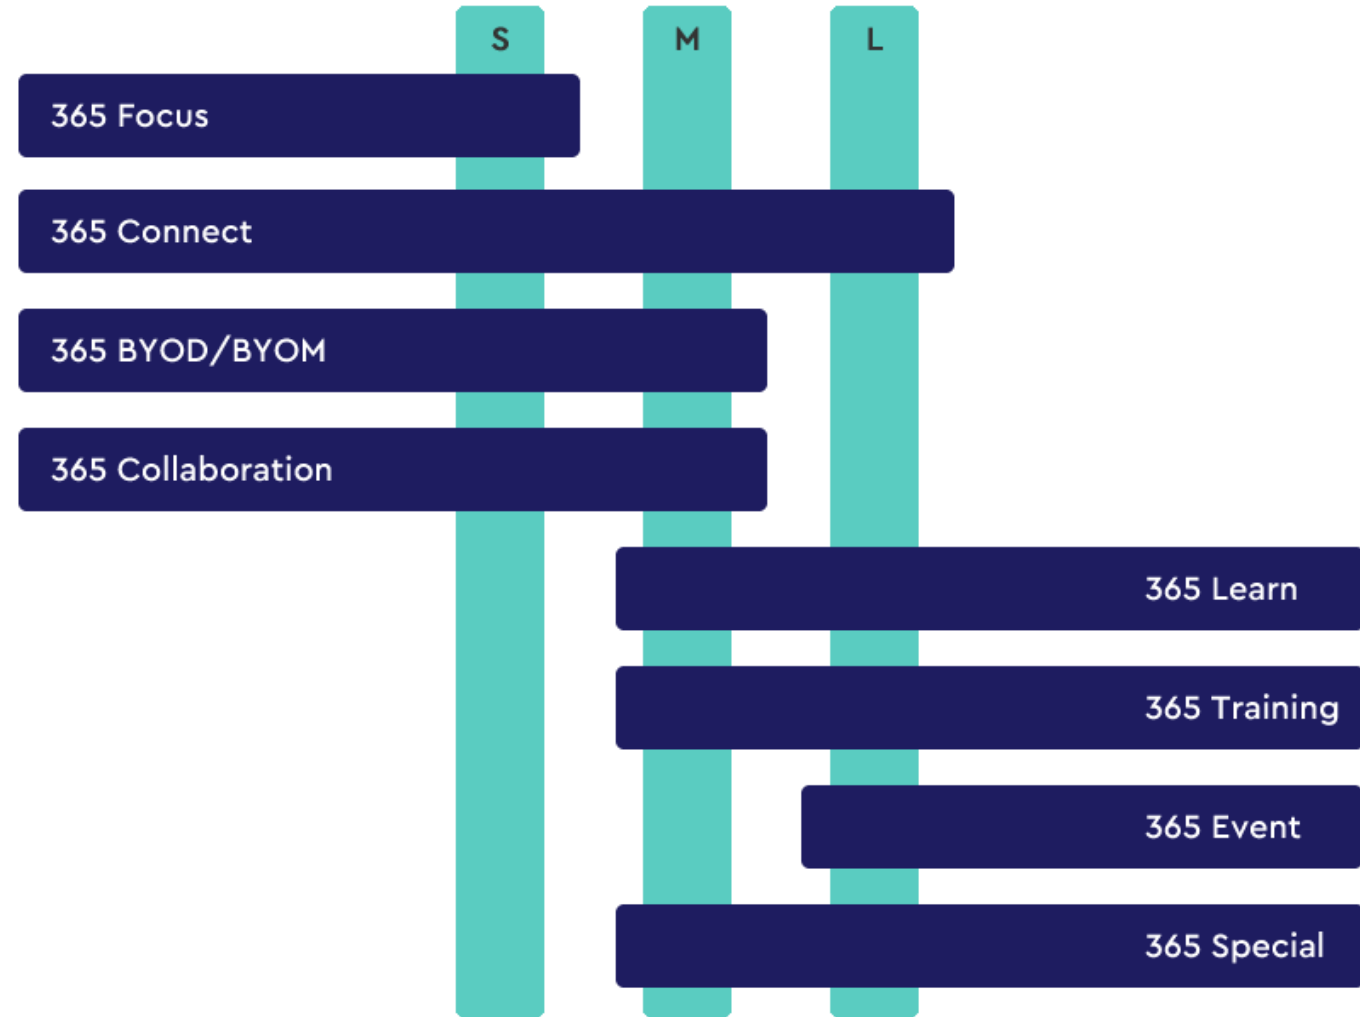

The Learn space is a purpose-built concept for education, also known as LearnAnywhere, and is developed by Logitech and Epson. Optimal hybrid teaching is the core of the concept. It allows any teacher to teach both in-class and remote teaching via video access. Every student, regardless of online or onsite, gets the equivalent experience in explanation, content sharing and whiteboarding

We often see this set-up in commercial organizations for training, product updates, offline brainstorming and onboarding staff.

Room size vs meeting functionalities
